WORLD AGRICULTURAL SUPPLY AND DEMAND ESTIMATES

United States Department of Agriculture
Economic Research Service
Foreign Agricultural Service

Approved by the World Agricultural Outlook Board

WASDE-264 - March 11, 1992

HIGHLIGHTS

Prospective global cotton stocks are sharply higher this month, based on much larger crops indicated for China and Pakistan and little change in projected world consumption. Projected U.S. cotton stocks are 3.9 million bales, 5 percent below a month ago, as forecast U.S. mill use is up slightly. U.S. soybean stock prospects are unchanged at 325 million bushels, while projected soybean oil stocks are lower because of indicated larger domestic use.

World and U.S. wheat and coarse grain stock prospects are little changed. While there are a number of changes in foreign trade projections, U.S. export and domestic use estimates are unchanged. Expected June 1 wheat stocks of 390 million bushels are the lowest since 1974 and projected September 1 corn stocks of 1,091 million bushes are the lowest since 1984.

U.S. sugar supply and demand is now included in this report. The table appears on page 30. Prospective U.S. sugar stocks are above earlier indications because sugar yields slightly exceed expectations and use is weaker. Still, projected stocks next October 1 of 1.4 million short tons are slightly below the carryin level, since the rise in use is expected to exceed the increase in the 1991/92 supply.

Projected 1992 U.S. meat output is up 0.7 percent this month and is 4 percent higher than a year ago. Most of the increase this month results from larger pork and beef production indicated for the first quarter.

GRAINS

WHEAT. Forecast 1991/92 world wheat supply and use are up slightly from last month. However, the gain in forecast world trade is due to an increase in intra-EC exports and imports which outweigh expected drops elsewhere. Prospective imports are down 1 million tons for the former USSR, as problems in arranging financial assistance are expected to delay some shipments beyond the end of the local marketing year. Also, forecast imports are down more than 1 million tons for the North Africa/Middle East region. Forecast exports by East Europe and EC exports to non-member countries are down this month.

Forecast U.S. 1991/92 supply, use and ending stocks are unchanged from last month.

COARSE GRAINS. Forecast 1991/92 global coarse grain production is down from last month, but consumption and trade are up. Because of generally favorable conditions to date, the prospective corn crops in Brazil and Argentina are up. However, these gains are more than offset by reductions in the drought-stricken countries of southern Africa, led by a 1.5-million-ton drop in prospective corn output in South Africa. Forecast imports by these countries are up more than 2 million tons from last month. In addition, former USSR coarse grain imports are up 1 million tons. Argentina's prospective corn and sorghum exports are up 1 million tons, while Eastern Europe's corn and barley exports are 1.5 million tons above last month.

Forecast U.S. 1991/92 feed grain supply, use and ending stocks are largely unchanged from last month.

RICE. Prospective 1991/92 global rice supply and use are little changed from last month. Forecast 1991/92 U.S. imports are up 0.8 million cwt because of larger-than-expected imports to date. This change is reflected in prospective 1991/92 ending stocks. The forecast price range is down 10 cents on the high end to $7.20 to $7.50 per cwt.

OILSEEDS

World oilseed production in 1991/92 is forecast at a record 225.1 million tons, up 3 percent from last year and above last month. Foreign production is forecast at 160.8 million tons, up 3 percent from last month and 2 percent from last year. Production gains are indicated for cottonseed and soybeans, while reductions are made for sunflowerseed and peanuts. U.S. production is unchanged at 64.3 million tons.

Global soybean production is forecast at 105.7 million tons in 1991/92, up slightly from a month ago and 2 percent over last year. Foreign production of 51.7 million tons is up a net 0.5 million tons from last month while the U.S. crop is unchanged at 54.0 million tons. China's soybean crop is cut 0.5 million tons based on official Chinese reports. This is more than compensated by a 1.0-million-ton increase in Brazil's soybean crop because of favorable crop growing conditions. Upward revisions to old-crop soybeans in 1990/91 were made for both Argentina and Brazil, adding to 1991/92 beginning inventories.

World trade in soybeans and soybean meal for 1991/92 is up slightly from month-earlier indications, although soybean exports are up about 6 percent from year-earlier levels. Larger South American supplies are forecast to add only slightly to exports in 1991/92, with most of the additional supplies carried into 1992/93. Slightly higher soybean imports and crush are indicated this month, mainly in East Asian markets and for Spain.

World soybean crush is forecast to reach 89.0 million tons, up about 1 million tons from last month, based mostly on larger crush forecasts for Argentina and Brazil. Brazil's domestic soybean meal use is forecast to reach a record 3.4 million tons.

Soybean meal domestic use and export numbers were revised for the United States for 1988/89 through 1991/92 to reflect the inclusion of soybean hull meal exports in the total export figure. Domestic use, calculated as a residual, was reduced as a result. Hull meal exports for 1990/91 were reported by the Census Bureau at 313,400 metric tons.

World soybean oil production and use are forecast slightly higher this month. Use gains are also indicated for other countries including Brazil, Spain and the United States. U.S. soybean oil use prospects are raised based on a stronger than expected year-to-date use and lower than expected stocks on January 31, 1992.

Season-average prices for soybeans are increased slightly this month to a range of $5.35 to $5.85 per bushel. Soybean meal prices are unchanged while soybean oil prices are raised to a range of 18.5 to 21.0 cents per pound.

LIVESTOCK, POULTRY AND DAIRY

The beef production forecast is raised this month. Production in the first quarter is surpassing expectations largely as a result of larger than anticipated nonfed slaughter. Beef export prospects have improved and now stand 14 percent above last year. Steer prices are exceeding expectations and the estimate for the first quarter is increased.

Pork production is exceeding expectations and the estimate for the first quarter is raised. The Hogs and Pigs report to be released on March 27 will provide insight into the 1992 pork

production outlook. The forecast of pork imports for 1992 is reduced because of lower prospective shipments from Denmark and Poland.

First-quarter broiler production is also exceeding expectations and the estimate for the first quarter is raised. Export prospects for broilers and turkeys also have improved.

Data recently released by NASS showed only minor revisions in the milk production estimates for 1990 and 1991. However, the number of cows in the last half of 1991 was lower than previously reported while output per cow was larger. Based on these data, small revisions are made in the milk production forecast. The lagging economy likely will hold commercial use a little below previously expected levels. The forecast of CCC net removals on a milkfat basis is increased and these removals likely will be even more heavily weighted by butter than previously anticipated. The forecast of CCC purchases of butter is increased while those for cheese and nonfat dry milk are reduced. The milk price forecasts are raised slightly as prices have been a little stronger than anticipated.

COTTON

Significantly larger production highlights this month's revisions in the world cotton outlook for 1991/92. Output is revised up 3.5 percent to a record 95.5 million bales, primarily reflecting much larger crops in China and Pakistan. This revision places global production nearly 10 million bales above 1990/1991. Meanwhile, consumption and trade prospects remain near both month-earlier and year-earlier levels. With relatively stable use and larger production, stocks are expected to increase sharply to 38 million bales, the highest level in 6 years.

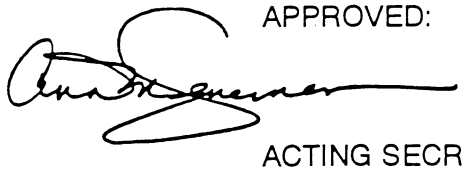

Boosted by record production, foreign cotton stocks are projected to increase more than 8 million bales during 1991/92. China's crop is revised up 11 percent this month to a near-record 26 million bales based on official Chinese government statistics, which indicate both larger area and higher yields than expected earlier. Pakistan's crop also is revised up one-tenth to a record 9.7 million bales, reflecting larger than anticipated late-season arrivals at gins. Foreign consumption and trade estimates are little changed this month.

U.S. mill consumption for 1991/92 is expected to total 9.3 million bales, up 2 percent from February indications as demand continues exceptionally strong. With export prospects unchanged, this season's U.S. ending stocks are projected at 3.9 million bales, 5 percent below a month earlier, but still sharply above the carryin.

SUGAR

USDA's fiscal year 1992 sugar production forecast is increased 100,000 tons this month. The increase is attributed mostly to a revision in the Florida cane sugar production forecast and more favorable prospects for beet sugar production this fiscal year. The forecast for domestic sugar deliveries in fiscal 1992 is revised down 50,000 tons because of indications of sluggish demand in October-January. However, the revised forecast remains 0.9 percent above last year's deliveries. Ending stocks are forecast down 5 percent from last year.

APPROVED:

ACTING SECRETARY OF AGRICULTURE

NOTE: Reliability calculations at end of report.
1/ Upland and extra-long staple; marketing year beginning August 1. Totals may not add due to rounding. 2/ Based on Bureau of Census data. 3/ Includes imports. 4/ Reflects the difference between ending stocks based on Bureau of Census data and the previous season's supply less total use. 5/ Domestic measure, cents per pound; metric measure, dollars per kilogram. 1991/92 prices are weighted averages for August-November; not a projection for the marketing year.

Note: Tables on pages 27-29 present a 10-year record of the differences between the March projection and the final estimate. Using world wheat production as an example, changes between the March projection and the final estimate have averaged 3.3 million tons (0.7%) ranging from -8.0 to 6.9 million tons. The March projection has been below the estimate 7 times and above 3 times.

1/ Fiscal years beginning Oct. 1. 2/ Historical data are from NASS, "Sugar Market Statistics." Puerto Rico not included. 3/ Actual arrivals under the quota with late entries and quota overfills assigned to the fiscal year in which they actually arrived. The tariff rate quota for 1991/92 is set at 1,527,000 short tons. Projected arrivals assume a shortfall of 20,000 tons. 4/ Quota exempt imports (for reexport, for polyhydric alcohol, from Canada, and high-duty), plus arrivals from Puerto Rico. 5/ Includes shipments to Puerto Rico. Other exports are mostly reexports. 6/ Transfer to sugar containing products for reexport, and to polyhydric alcohol. 7/ CCC disposal for domestic nonfood use, refining loss/gain adjustment, and residual. 8/ Ratio of ending stocks to the sum of exports, deliveries, and miscellaneous.

Note: The February forecast was released in the March 1992 Agricultural Outlook.
