WORLD AGRICULTURAL SUPPLY AND DEMAND ESTIMATES

United States Department of Agriculture
Economic Research Service
Foreign Agricultural Service

Approved by the World Agricultural Outlook Board

WASDE-267 - June 10, 1992

HIGHLIGHTS

NOTE: See page 23 for analytical assumptions underlying 1992/93 projections and for reporting definitions applicable to the former USSR.

Projected 1992/93 U.S. wheat supplies have tightened over the past month because of the lower winter wheat crop. U.S. wheat stocks at the end of 1992/93 are projected at 427 million bushels, down 22 million from last month. Projected U.S. corn stocks at the end of 1992/93 remain at 1.67 billion bushels, up from expected carryin stocks of 1.12 billion.

U.S. soybean carryover stocks for 1992/93 are projected at 240 million bushels, slightly above last month, because carryin stocks are a little higher. The world cotton outlook still shows a projected crop about 5 million bales above prospective use in 1992/93. Projected U.S. stocks of 4.6 million bales at the end of 1992/93 are down slightly from last month but well above the slightly reduced beginning stocks forecast of 3.8 million.

The increase in U.S. sugar production in 1992/93 still is expected to exceed the slight expansion in use. U.S. animal product forecasts for 1992 this month indicate larger egg production and lower egg prices.

GRAINS

Wheat. Global 1992/93 wheat supply and use projections are little changed from last month. Smaller prospective crops in the United States, Morocco and South Africa are more than offsetting larger projected output in the EC and China. Most of the gain in projected 1992/93 global stocks is because of the higher expected output in the EC and because of higher carryin stocks for Canada resulting from lower 1991/92 exports.

For the United States, projected 1992/93 wheat production is down 81 million bushels from last month, because of a reduction in forecast winter wheat yields and harvested area. Projected 1992/93 ending stocks are down 22 million bushels, as the lower output is only partially offset by a reduction in domestic use and exports. The projected price range is up 10 cents to $3.25 to $3.55 per bushel. For 1991/92, estimated imports are up 2 million bushels and exports are up 10 million, while food use is down 10 million.

Coarse Grains. Global 1992/93 world coarse grain supply and use projections are up slightly from last month. Higher projected production mainly reflects a larger prospective corn crop in China. Also, China's 1991/92 corn crop is almost 3.8 million tons above last month based on recently published official estimates.

There are no changes in projected U.S. 1992/93 production of corn and the other feed grains. The only changes in the 1992/93 supply and use projections for feed grains are marginally smaller beginning and ending stocks of sorghum, but larger stocks of oats. The forecast of sorghum carryin stocks is down 5 million bushels as a 15-million-bushel rise in 1991/92 exports is partially offset by a 10-million-bushel reduction in forecast feed and residual. The stocks changes in oats are linked to higher estimated 1991/92 oats imports. The forecast 1991/92 price ranges for corn and sorghum are narrowed 5 cents on each end to $2.35 to $2.45 and $2.25 to $2.35, respectively.

Rice. Global 1992/93 milled rice supply and use projections are essentially unchanged from last month. For 1991/92, world production, consumption and ending stocks are down, mainly because of reductions for China and the Philippines. For the United States, 1991/92 domestic and residual use is down and forecast ending stocks are up from last month. Projected 1992/93 domestic and residual use is also below last month, reflecting expectations of a continued slower rate of growth. However, exports and ending stocks are larger. The 1991/92 price range is down 10 cents on the top end to $7.45 to $7.55 per cwt, while the 1992/93 range is reduced 25 cents per cwt on each end to $6.25 to $7.25.

OILSEEDS

World oilseed production for 1991/92 is estimated at 223.8 million tons, nearly unchanged from last month but 3 percent above the previous year. The major change this month is a reduction in Paraguay's soybean crop. Other changes are mainly for China's oilseed crops, based on their official statistics. Paraguay's soybean crop was hurt by dry weather during flowering and by heavy rains at harvest.

World 1991/92 soybean crush and trade estimates are little changed this month, although there are significant changes for individual countries. Paraguay's soybean exports are reduced 0.4 million tons because of the smaller crop but Brazil's exports are raised by 0.5 million tons based on strong exports in recent weeks and a sharp rise in export registrations. Small increases are indicated in soybean imports by the EC and China. For the EC and former Soviet Union, soybean meal imports and domestic use of soybean meal are reduced.

In the United States, soybean crush and soybean meal exports are reduced slightly, mainly in response to weaker global soybean meal import prospects. U.S. stocks are increased sightly for both 1991/92 and 1992/93, reflecting the smaller 1991/92 U.S. crush.

Season-average prices for soybeans, soybean meal and soybean oil are unchanged from last month for both 1991/92 and 1992/93.

COTTON

The world cotton outlook for 1992/93 is virtually unchanged this month. Production is projected to exceed use by 5 million bales, resulting in a further gain in stocks. Output is projected at 94 million bales, 1 percent below 1991/92's record, as policies in several major producing countries aim to maintain production in the face of lower world prices. Competitive cotton prices and prospective economic growth in several large consuming countries may help boost global use about 4 percent to a record 89 million bales. Trade is expected to benefit from improved use and abundant supplies. Ending stocks are projected up 1 percent from last month because of a larger carryin and up 12 percent from a year earlier--to a 7-year high of 43.6 million bales.

The 1992 U.S. cotton crop also is expected to exceed use, resulting in a further buildup in stocks. Production is projected at 17.2 million bales, unchanged from last month. However, recent cool, wet weather in Texas, particularly the High Plains, is raising concern about production prospects. Total U.S. use is projected at 16.5 million bales with consumption matching 1991/92's revised 9.5 million and exports increasing by 3 percent to 7 million. Thus, stocks are projected at 4.6 million bales, 0.1 million below a month earlier, but still 0.8 million above the 1991/92 estimate.

SUGAR

Forecast U.S. sugar production in fiscal year 1991/92 is unchanged at 7.2 million short tons, raw value. However, cane sugar production is revised 10,000 tons higher and beet sugar 10,000 tons lower, bringing the estimates in line with the revised crop-year estimates in today's Crop Production report. Forecast imports under the tariff rate quota in 1991/92 are reduced 10,000 tons. Imports and exports under the sugar reexport program are increased by 100,000 tons each. The projections for 1992/93 are not significantly altered.

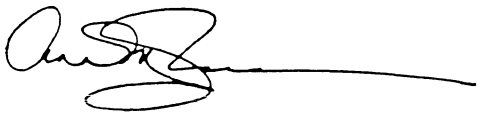

LIVESTOCK, POULTRY AND DAIRY

The supply, use and price forecasts for meats are little changed this month. Procedures for estimating non-federally inspected poultry meat production and net total production have been revised. This new procedure results in a downward revision in poultry meat output. Also, a new retail price series for broilers has been introduced. See the May 1992 issue of the Livestock and Poultry Situation and Outlook Report for details on these new procedures.

Egg producers have increased the egg laying flock more than anticipated and egg production is larger than expected. The egg production forecast for the remainder of the year is increased. Prices have weakened under the pressure of larger supplies and the 1992 price forecast is lowered.

The dairy forecasts are unchanged this month.

Note: Reliability calculations at end of report.

1/ Data based on local marketing years except for Argentina and Brazil which are adjusted to an October-September year. 2/ World imports and exports may not balance due to differences in local marketing years and to time lags between reported exports and imports. Therefore, world supply may not equal world use. 3/ Argentina, Brazil and EC-12, (includes former German Democratic Republic). 4/ India, China and Pakistan.

NOTE: Reliability calculations at end of report.

1/ Marketing year beginning August 1. Totals may not add and trade may not balance due to rounding and other factors. 2/ For foreign countries, reflects cotton lost or destroyed in the marketing channel; for the United States, reflects the difference between ending stocks based on Bureau of Census data and implicit stocks based on supply less total use. 3/ Less than 5,000 bales. 4/ Australia, China, Central America, Egypt, Mexico, Pakistan, Sudan, Turkey and the former USSR. 5/ Europe, Japan, Hong Kong, Korea and Taiwan.

EXPLANATORY NOTES

1992/93 PROJECTIONS. This report presents USDA's assessment of agricultural supply and demand and price prospects for the 1992/93 season. Projections for U.S. and world crop production and use are based on economic analysis, trends and judgment. Early-season projections are highly tentative. Substantial variation may result from weather developments, economic activity and policy changes. U.S. production forecasts adopt National Agricultural Statistics Services (NASS) forecasts for winter wheat and utilize Prospective Plantings for other crops. For crops other than winter wheat, yields basically reflect time series analysis. NASS acreage and production forecasts will be adopted as they become available this summer. Reliability tables showing the historical accuracy of supply/use projections made during June are presented on pages 29-31.

ESTIMATES FOR THE FORMER SOVIET UNION. The projections of 1992/93 grain imports for the former Soviet Union assume various forms of international financial assistance.

Beginning with the May issue, estimates for the former Soviet Union were modified as follows:

-- Minor grains and pulses are no longer included in estimates of total grain production. total grain production is defined as wheat, coarse grains and milled rice. (Rice was formerly reported on a rough basis.)

-- Grain production is estimated on a clean-weight basis instead of bunker-weight basis.

-- Supply and demand estimates for wheat and coarse grains are reported separately for the Baltic States and the "FSU-12" former Soviet Union excluding the Baltic States).

For cotton, publication of separate supply and demand estimates for the Baltic States and FSU-12 will start with the July 9 issue.

1/ Fiscal years beginning Oct. 1. 2/ Historical data are from NASS, "Sugar Market Statistics." Puerto Rico not included. 3/ Actual arrivals under the quota with late entries and quota overfills assigned to the fiscal year in which they actually arrived. The tariff rate quota for 1991/92 is set at 1,527,000 short tons. Projected arrivals assume a shortfall of 30,000 tons. 4/ Quota exempt imports (for reexport, for polyhydric alcohol, from Canada, and high-duty), plus arrivals from Puerto Rico. 5/ Includes shipments to Puerto Rico. Other exports are mostly reexports. 6/ Transfer to sugar containing products for reexport, and to polyhydric alcohol. 7/ CCC disposal for domestic nonfood use, refining loss/gain adjustment, and residual.

Note: Totals may not add due to rounding. Reliability calculations at end of report. 1/ Marketing year beginning October 1. 2/ Milk equivalent, milkfat basis. 3/ Includes products exported under the Dairy Export Incentive Program. 4/ Milk of average fat test. Does not reflect any deductions from producers as authorised by legislation.

Note: Tables on pages 29-31 present a 11-year record of the differences between the June projection and the final estimate. Using world wheat production as an example, changes between the June projection and the final estimate have averaged 16.3 million tons (3.2%) ranging from -25.1 to 20.4 million tons. The June projection has been below the estimate 6 times and above 5 times.

1/ See pages 29 and 30 for record of reliability for U.S. wheat, rice, soybeans and cotton. 2/ Final estimate for 1981/82-90/91 is defined as the first November estimate following the marketing year and for 1991/92 last month's estimate. 3/ May not total 11 for crops and 10 for animal production if projection was the same as the final estimate. 4/ Calendar years 1982 thru 1991 for meats and eggs; October-September years 1981/82 thru 1990/91 for milk. Final for animal products is defined as latest annual production estimate published by NASS.
