WORLD AGRICULTURAL SUPPLY AND DEMAND ESTIMATES

United States Department of Agriculture
Economic Research Service
Foreign Agricultural Service

Approved by the World Agricultural Outlook Board

WASDE-268 - July 9, 1992

HIGHLIGHTS

1992/93 Projections

This report adopts U.S. acreage and production forecasts for winter wheat, Durum, other spring wheat, barley and oats released today by the National Agricultural Statistics Service (NASS). For other U.S. crops, production projections incorporate acreage as reported by NASS on June 30. Underlying yield projections reflect time series analysis and judgment, as in May and June, supplemented with qualitative information on the probable impact of weather to date. As such, these projections remain highly tentative.

World wheat production is projected lower than last month as a larger U.S. crop only partially offsets smaller output in several other countries, including the former USSR. U.S. wheat stocks at the end of 1992/93 are projected at 521 million bushels, up from 427 indicated a month ago. Projected global coarse grain production is down this month, mainly because of less favorable crop conditions in several countries including the United States. U.S. 1992/93 corn ending stocks are indicated at 1,516 million bushels, below the 1,671 million projected last month.

U.S. cotton stocks at the end of 1992/93 are placed at 3.5 million bales, 1.1 million below last month, largely because weather and crop conditions suggest a smaller U.S. crop. Soybean stocks, projected at 285 million bushels, are above 240 million of a month ago because of reduced 1991/92 exports and increased planted 1992 acreage. U.S. sugar production prospects are up this month with indications of more sugarcane acreage and generally favorable conditions for higher sugarcane and sugar beet yields.

GRAINS

WHEAT. Projected global 1992/93 production is down from last month largely because of lower than expected plantings in Canada, drought-related reductions in northern Europe and a smaller prospective crop in the former USSR. Projected global stocks are little changed as higher U.S. stocks offset lower stocks in Canada and several other countries.

Forecast 1992/93 U.S. wheat production is up 45 million bushels from last month, largely because of gains in winter wheat production. The larger crop and higher carryin stocks result in a 94-million-bushel gain in projected 1992/93 ending stocks.

COARSE GRAINS. Projected global 1992/93 production is down around 13 million tons from last month, led by lower prospective crops in the United States, northern Europe, the former USSR and Canada. The United States and the EC account for most of the drop in projected 1992/93 global ending stocks.

U.S. 1992/93 corn production is projected at 8,450 million bushels, down 125 million from last month because of unfavorable conditions in some key growing areas. The lower crop and forecast carryin stocks result in a 155-million-bushel reduction in projected ending stocks. The projected price range is up 10 cents on each end to $2.00 - $2.40 per bushel. Projected 1992/93 ending stocks of sorghum are up as a larger crop more than offsets a drop in forecast carryin stocks and higher projected exports.

RICE. Projected 1992/93 global rice production is up from 1991/92 , but down from last month's projected level. Larger crops for China, India, Indonesia, Japan and the Philippines account for most of the projected year-to-year rise in output. A further reduction in global stocks is projected in 1992/93 as consumption exceeds production for the second consecutive year. The projected U.S. 1992/93 crop is unchanged from last month but ending stocks are down because of lower projected imports and carryin stocks. The lower forecast 1991/92 ending stocks are due to higher forecast exports and a reduction in imports.

OILSEEDS

NOTE: Starting with this issue, estimates of world and U.S. supply and use for total oilseeds, oilseed meals and vegetable oils are reported in table 5. Further, these aggregate series have been revised to exclude flaxseed, which generally accounts for about 1 percent of world oilseed production.

World oilseed production for 1992/93 is forecast at a record 222.8 million tons, up 1 percent from a year earlier and 1 percent from last month, reflecting larger prospective foreign oilseed crops. Projected U.S. oilseed production of 62.9 million tons is 2 percent below last year but about 2 percent above last month, because of upward revisions to planted soybean acres. U.S. soybean production is projected only slightly below last season. Most of the U.S. decline is concentrated in sunflowerseed and peanuts, down 24 and 14 percent, respectively, due mostly to reduced plantings. Foreign oilseed production is forecast at a record 159.9 million tons, up 2 percent from last year. Large gains in sunflowerseed account for most of the increase abroad with a more modest rise forecast for soybean outturn. Other foreign oilseed crops are expected to be off slightly this season with rapeseed declining by around 4 percent due to reductions in the EC, China, Eastern Europe and Canada. Dry weather in northern Europe has cut yields for rapeseed.

Global oilseed crush in 1992/93 is projected to reach new highs, but growth will be below trend. Reductions in East European protein meal feeding and slow growth in most developed-country markets more than compensate for modest gains in East Asia and Latin American markets, particularly Mexico. U.S. protein meal use is projected to rise by about 1 percent in 1992/93. U.S. soybean crush may drop slightly as a small rise in domestic soybean meal use is more than offset by lower U.S. soybean meal exports.

Global oilseed trade is projected near 1991/92 levels. Slight gains for soybean exports are largely offset by declines in world rapeseed exports.

Global oilseed and soybean inventories are projected to decline for the third straight year. U.S. soybean ending stocks are projected at 7.8 million tons (285 million bushels), off 8 percent from 1991/92.

Season-average producer prices for soybeans in 1992/93 are projected to range between $5.00 and $6.20 per bushel, down slightly from last month.

COTTON

The world cotton outlook for 1992/93 remains fundamentally the same as last month as production still is expected to exceed consumption by more than 4 million bales, leading to a further gain in stocks. Output is projected near 93 million bales, 1 percent below June prospects because of a smaller projected U.S. crop. Global use also is projected down slightly from June indications, at 88.5 million bales, but still would be record high. Despite larger use, trade next season is expected to hold near 1991/92's 23-million-bale level as consumption growth will be concentrated in the major producing countries of China, Pakistan, India and the U.S. World ending stocks are projected at 42 million bales, down 4 percent from June but 10 percent above the carryin level.

Smaller production, exports and stocks, along with larger mill use, highlight this month's revisions in the U.S. cotton outlook for 1992/93. The crop is projected at 16 million bales, down 7 percent from June indications as cool, wet weather in West Texas has damaged prospects. Exports are revised down 4 percent to 6.7 million bales, reflecting the reduced U.S. supplies and sluggish import demand by foreign countries. Mill use prospects remain strong, with use expected to increase 2 percent to 9.7 million bales. Ending stocks are projected at 3.5 million bales, 0.3 million below the beginning level and 1.1 million below last month.

Foreign cotton prospects for 1992/93 feature large production and consumption, along with increasing trade and stocks. Another big crop in China will boost stocks further--despite larger use--to a projected 17 million bales. A similar outlook prevails in Pakistan. In contrast, production and consumption in the former USSR are projected to decline further while exports are expected to increase.

SUGAR

Projected U.S. sugar production in fiscal year 1992/93 is revised up 100,000 tons this month to 7.6 million short tons, raw value. Acreage in Louisiana and Texas is greater than had been expected, excellent growing conditions in Florida should prompt above-average yields, and conditions in sugar beet areas generally are favorable. The beet sugar forecast assumes 180,000 tons of sugar will be produced from desugaring molasses.

Forecast 1991/92 imports under the reexport program are increased 80,000 tons to 680,000 tons, and refined sugar exports are increased 90,000 tons to 620,000 tons, raw value. In addition 70,000 tons is likely to be transferred to sugar-containing products for export. Sugar traded in the reexport programs is likely to be similar in 1992/93.

LIVESTOCK, POULTRY AND DAIRY

The U.S. meat production forecast for 1992 is up slightly from a month ago and still over 4 percent above the year-earlier level. The recent Hogs and Pigs report showed a little larger than anticipated March-May pig crop, boosting fourth-quarter pork production slightly. For all of 1992, pork production is expected to be record large and up almost 8 percent from a year ago.

Expected levels of milk production and commercial use for 1991/92 are down slightly from a month ago. Output per cow is a little weaker than anticipated, holding down production gains. Tight milk supplies this summer likely will limit gains in commercial use and milk prices are expected to continue increasing. Milk price forecasts are increased slightly.

Use, total	48.3	46.8	47.3	47.3
Ending stocks	11.7	10.3	10.1	12.1

Note: Totals may not add due to rounding. Reliability calculations at end of report. 1/ Marketing year beginning August 1. 2/ Includes the following quantities of broken kernel rice (type undetermined) not included in estimates of beginning stocks by type (in mil. cwt): 1990/91, 1.4; 1991/92, 1.4; 1992/93, 1.4. 3/ Residual includes unreported use, processing losses and estimating errors. Use by type may not add to total rice use because of the difference in brokens between beginning and ending stocks. 4/ Marketing-year weighted average price received by farmers. 5/ Includes imports.

Note: Reliability calculations at end of report.

1/ Data based on local marketing years except for Argentina and Brazil which are adjusted to an October-September year. 2/ World imports and exports may not balance due to differences in local marketing years and to time lags between reported exports and imports. Therefore, world supply may not equal world use. 3/ Argentina, Brazil and EC-12, (includes former German Democratic Republic). 4/ India, China and Pakistan.

Stocks to use ratio	16.03	15.14	NA	NA

1/ Fiscal years beginning Oct. 1. 2/ Historical data are from NASS, "Sugar Market Statistics." Puerto Rico not included. 3/ Actual arrivals under the quota with late entries and quota overfills assigned to the fiscal year in which they actually arrived. The tariff rate quota for 1991/92 is set at 1,527,000 short tons. Projected arrivals assume a shortfall of 30,000 tons. 4/ Quota exempt imports (for reexport, for polyhydric alcohol, from Canada, and high-duty), plus arrivals from Puerto Rico. 5/ Includes shipments to Puerto Rico. Other exports are mostly reexports. 6/ Transfer to sugar containing products for reexport, and to polyhydric alcohol. 7/ CCC disposal for domestic nonfood use, refining loss/gain adjustment and residual.

1/ Total including farm production for red meats and federally inspected plus non-federally inspected less condemnations for poultry.
2/ Retail-weight basis. 3/ Carcass weight for red meats and certified ready-to-cook for poultry. 4/ Beef, pork, veal, lamb and mutton.
5/ Broilers, turkeys and mature chicken.
NOTE: IN JUNE, PROCEDURES FOR ESTIMATING NON-FEDERALLY INSPECTED POULTRY PRODUCTION AND NET POULTRY MEAT PRODUCTION WERE REVISED AND A NEW PER CAPITA RETAIL WEIGHT SERIES FOR BROILERS WAS DEVELOPED.

Note: Totals may not add due to rounding. Reliability calculations at end of report. 1/ Marketing year beginning October 1. 2/ Milk equivalent, milkfat basis. 3/ Includes products exported under the Dairy Export Incentive Program. 4/ Milk of average fat test. Does not reflect any deductions from producers as authorised by legislation.

Note: Tables on pages 29-31 present a 11-year record of the differences between the July projection and the final estimate. Using world wheat production as an example, changes between the July projection and the final estimate have averaged 15.7 million tons (3.1%) ranging from -34.6 to 15.4 million tons. The July projection has been below the estimate 6 times and above 5 times.
