Approved by the World Agricultural Outlook Board

WASDE-270 - September 10, 1992

HIGHLIGHTS

U.S. 1992/93 wheat carryover stocks are projected at 674 million bushels, up from 652 million a month ago, as a larger crop offsets improved export prospects. Projected U.S. corn stocks of 1,826 million bushels also are up from last month's total of 1,803 million because a bigger corn crop and reduced export prospects exceed improved domestic use for 1992/93 and reduced 1991/92 ending stocks.

U.S. soybean stocks at the end of 1992/93 of 315 million bushels are slightly below last month's 320 million because of better export prospects. Expected cotton stocks are down to 3.8 million bales, from 4.1 million last month, reflecting a smaller forecast U.S. crop. The U.S. sugar crop is below last month's expectations, mainly because of weather damage in Louisiana. Sugar carryout stocks for 1992/93 are projected one-tenth below the beginning level.

U.S. meat production and price projections are little changed from last month. The 1993 increase in total meat production of almost 2 percent is below 1992's forecast gain of more than 4 percent, mainly because of much slower growth in pork output. Prospects for milk prices are weaker than previously expected.

GRAINS

WHEAT. Projected global 1992/93 production is up fractionally from last month as a higher U.S. crop offsets reduced EC output and lower prospective plantings in Argentina. While forecast Canadian production is unchanged from last month, freezing temperatures, snow and rain have apparently resulted in a reduction in the quality of a sizable portion of the crop. The reduced availability of quality wheat in Canada, the smaller Argentine crop and recent EEP initiatives lead to a rise of 50 million bushels in U.S. exports.

Forecast 1992/93 U.S. wheat production is up 72 million bushels from last month, but projected ending stocks are up only 22 million because of the higher exports. The price range is up 15 cents on the low end and 5 cents on the top end to $2.95 to $3.25 per bushel.

COARSE GRAINS. Projected world 1992/93 production and ending stocks are up from last month, but trade is down. Higher prospective crops in the United States and several other countries offset reductions elsewhere, primarily in the EC and Canada. Much of the drop in projected global trade from last month is tied to increased availability of feed wheat, which will replace some of the expected corn imports, especially in South Korea.

U.S. 1992/93 corn production is forecast up marginally from last month, and larger crops are also expected for the other feed grains. Projected 1992/93 ending stocks of corn are up 23 million bushels, as the larger crop and a 50-million-bushel drop in exports more than offset a smaller forecast carryin and higher domestic use.

RICE. Projected global 1992/93 global rice supply, use and ending stocks are up slightly from last month, while trade is unchanged. The higher output is mainly due to larger crops in Indonesia, Thailand and Vietnam. U.S. 1992/93 output and imports are forecast down slightly, but a larger carryin and smaller domestic and residual use are resulting in only slightly smaller ending stocks. The reported 1991/92 ending stocks are slightly higher than forecast last month, resulting in a lower 1991/92 domestic and residual use estimate.

OILSEEDS

World oilseed output for 1992/93 is projected at a record 224.4 million tons, up 1 percent from last year but down slightly from a month ago. Most of this month's change is for foreign oilseed production, projected at 158.7 million tons, 0.7 million tons below a month ago. Reductions in prospective rapeseed yields and production in Canada and the EC and for cottonseed in Pakistan are only partially offset by a larger prospective peanut crop in India. A late maturing rapeseed crop and a series of frosts in Canada are expected to sharply reduce yields and contribute to crop quality problems. U.S. total oilseed production is down slightly this month at 65.7 million tons. Soybean production is forecast slightly above August indications at 56.7 million tons, nearly offsetting small declines in forecast cottonseed and peanut production.

World soybean crush and trade projections are a little higher this month, reflecting tighter supplies of competing oilseeds and a weaker U.S. dollar. Reduced rapeseed production in Europe and slow marketings by EC producers have contributed to strong soybean and soybean meal export movement out of both Brazil and the United States beginning in late 1991/92. Most upward revisions for Brazil are reflected in the 1991/92 year, with upward revisions for U.S. soybean meal exports in 1991/92 and for soybeans in 1992/93. U.S. soybean oil export forecasts for both years are raised aided by several new vegetable oil EEP initiatives.

Projected U.S. ending stocks of soybeans and soybean oil for 1992/93 are cut this month, but remain slightly above year-earlier levels. Prices for soybeans are raised slightly to a range of $5.10 to $5.70 per bushel, and soybean oil prices are increased to 17.0 to 20.0 cents per pound. Soybean meal prices are unchanged at $160 to $180 per short ton.

COTTON

The world cotton outlook for 1992/93 is about unchanged this month, although stocks are revised down based on projections for smaller production. Output is expected to total 92.1 million bales, 1 percent below August indications, reflecting reduced crop prospects in Pakistan, the United States and Mexico. Projected global use of 88 million bales is modestly below a month earlier but still record high. Even so, trade this season is expected to hold near the 23-million-bale level of 1991/92 as consumption growth will be concentrated in the major producing countries of China, Pakistan, India and the United States. World ending stocks are projected at 42.5 million bales, down about 1 percent from August but 10 percent above the carryin level.

The U.S. cotton outlook for 1992/93 features lower production and exports than anticipated a month ago. Production is forecast at 15.9 million bales, down 3.5 percent from the August estimate. Output is 9.5 percent below 1991, reflecting in large part abandoned acreage in Texas. While prospects for mill use remain unchanged at 9.7 million bales, exports have been trimmed 6 percent to 6.3 million bales. Ending stocks are projected to total 3.8 million bales, down 0.3 million bales from last month and equal to the estimated beginning level.

SUGAR

Projected U.S. sugar production in fiscal year 1992/93 is revised down 250,000 tons this month to 7.5 million short tons, raw value. Damage to Louisiana sugarcane from Hurricane Andrew and anticipated below-average recovery of sugar from sugar beets prompted the revisions. Projected Louisiana sugar output is decreased from 1 million short tons to 800,000. Projected beet sugar output is revised down 50,000 tons to 4.1 million tons, including 180,000 tons of sugar produced from desugaring molasses.

The tariff rate quota for sugar imports in fiscal year 1992/93 is 1,357,000 short tons, down 170,000 tons from the 1991/92 quota. Sugar stocks at the end of 1992/93 are projected to decline a little more than 100,000 short tons from the year-earlier level.

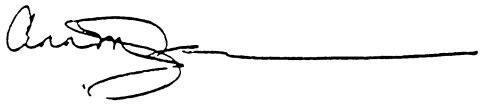

LIVESTOCK, POULTRY AND DAIRY

U.S. meat production outlook is little changed from a month ago. Total meat output is still expected to increase over 4 percent from a year earlier in 1992 and almost 2 percent in 1993.

Broiler and beef export projections are increased as exports have been stronger than anticipated and prospects for the rest of 1992 and 1993 are improved, particularly for broilers. Pork imports are running below expectations and prospects point to lower levels than previously forecast.

Unseasonably cool temperatures in some milk-producing areas this summer have helped boost milk output per cow above anticipated levels. The milk production estimate for 1991/92 is increased 0.7 billion pounds and the 1992/93 projection is raised 0.2 billion pounds. Prospects for milk prices are weaker than previously expected.

APPROVED:

ANN M. VENEMAN
ACTING SECRETARY OF AGRICULTURE

Ending stocks	11.7	12.9	10.7	13.8

Note: Totals may not add due to rounding. Reliability calculations at end of report. 1/ Marketing year beginning August 1. 2/ Includes the following quantities of broken kernel rice (type undetermined) not included in estimates of beginning stocks by type (in mil. cwt): 1990/91, 1.4; 1991/92, 1.4; 1992/93, 1.4. 3/ Residual includes unreported use, processing losses and estimating errors. Use by type may not add to total rice use because of the difference in brokens between beginning and ending stocks. 4/ Marketing-year weighted average price received by farmers. 5/ Includes imports.

1/ Fiscal years beginning Oct. 1. 2/ Historical data are from NASS, "Sugar Market Statistics." Puerto Rico not included. 3/ Actual arrivals under the quota with late entries and quota overfills assigned to the fiscal year in which they actually arrived. The tariff rate quota for 1991/92 is set at 1,527,000 short tons. Projected arrivals assume a shortfall of 47,000 tons. 4/ Quota exempt imports (for reexport, for polyhydric alcohol, from Canada, and high-duty), plus arrivals from Puerto Rico. 5/ Includes shipments to Puerto Rico. Other exports are mostly reexports. 6/ Transfer to sugar containing products for reexport, and to polyhydric alcohol. 7/ CCC disposal for domestic nonfood use, refining loss/gain adjustment and residual.

Note: Tables on pages 29-31 present a 11-year record of the differences between the September projection and the final estimate. Using world wheat production as an example, changes between the September projection and the final estimate have averaged 10.8 million tons (2.1%) ranging from -30.7 to 9.4 million tons. The September projection has been below the estimate 6 times and above 5 times.
