WORLD AGRICULTURAL SUPPLY AND DEMAND ESTIMATES

United States Department of Agriculture
Economic Research Service
Foreign Agricultural Service

Approved by the World Agricultural Outlook Board

WASDE-278 - May 11, 1993

HIGHLIGHTS

NOTE: See page 5 for analytical assumptions underlying 1993/94 projections.

Preliminary projections for 1993/94 call for smaller world grain crops but larger crops of oilseeds and cotton.

In the United States, wheat stocks at the end of 1993/94 are projected at 658 million bushels, up from the beginning level of 510 million, because of larger supplies and lower use. Projected September 1, 1994, corn stocks of 2.12 billion bushels are about unchanged from beginning stocks.

Soybean ending stocks for 1993/94 are projected at 280 million bushels, below the 325 million expected on September 1, 1993, because of a smaller crop. Projected cotton stocks of 5.7 million bales are well above the beginning level of 4.4 million because of an expected larger crop. Sugar production is likely to be a little lower in 1993/94, while deliveries may move higher.

Slightly higher U.S. prices are indicated this month for broilers, milk and cattle.

GRAINS

WHEAT. Projected 1993/94 global production is down around 2 percent from 1992/93, largely because of expected reductions in the former Soviet Union (FSU), China and the EC. Global wheat imports are little changed from the forecast 1992/93 level, as higher imports by the FSU, China, South Korea, North Africa and several other countries offset reductions for Eastern Europe, South Asia and several other countries. Exports are projected up from 1992/93 in Argentina, Australia and Eastern Europe because of expected larger crops, and in Canada because of a better quality crop.

U.S. 1993/94 winter wheat production is forecast up almost 13 percent. With trend yields for spring wheat, total U.S. wheat output is projected around 2 percent above 1992/93. Total use is projected to drop slightly as lower exports more than offset an expected rise in domestic use. Projected 1993/94 ending stocks are up 148 million bushels from the forecast carryin level. U.S. farm prices of wheat are projected at $2.55-$2.95 per bushel, compared with $3.25 for 1992/93. For 1992/93, forecast ending stocks are down 10 million bushels from last month as higher forecast exports more than offset lower domestic use.

COARSE GRAINS. Global 1993/94 production, trade and ending stocks are projected down from 1992/93. While lower U.S. output will account for much of the drop in world production, significant year-to-year reductions also are expected in the EC, India, China and the FSU. World coarse grain trade in 1993/94 is projected down from the forecast 1992/93 level, largely because of expected reductions in Eastern Europe, Canada and South Korea.

Smaller U.S. corn plantings and a return to trend yields from the record 1992 level are projected to result in a 1993 corn crop of around 8.5 billion bushels, down 10 percent. While domestic use is projected to continue to rise, exports are expected to drop. Projected

1993/94 ending stocks are little changed from forecast carryin. The farm price of corn is projected to average $1.85-$2.25 per bushel, compared with $2.00-$2.15 for 1992/93. Forecast 1992/93 ending stocks of corn are down from last month because of a 75-million-bushel increase in exports.

RICE. Global 1993/94 rice supplies are projected down from 1992/93. With consumption above production, projected 1993/94 ending stocks are down from last year. World 1993/94 trade is projected nearly unchanged from a year earlier.

U.S. 1993/94 supplies are projected up 3 percent from 1992/93, despite an expected 3 percent drop in production. Carryin stocks for 1993/94 are projected up around 40 percent. Projected 1993/94 domestic use and exports are up, while ending stocks are down 4 percent. Prices are projected to average $4.50-$6.00 per cwt, compared with $5.80-$6.00 for 1992/93.

OILSEEDS

World oilseed production in 1993/94 is projected at a record 228.3 million tons, up about 1 percent from 226.8 million tons in 1992/93. Foreign oilseed production shows a sharper gain of 4 percent to a record 163.2 million tons. China and Canada are likely to show the largest year-to-year gains.

U.S. oilseed production is projected at 65.1 million tons, down 5 percent from last year when extremely favorable growing and harvesting weather aided oilseed yields. Based on the March 31 Planting Intentions report, U.S. oilseed acres are expected to show little change. Soybean production is projected to drop about 7 percent to 55.7 million tons.

U.S. soybean use is projected to decline by 3 percent in 1993/94, mostly because of lower exports. Crush is projected unchanged as modest growth in domestic soybean meal use is offset by lower soybean meal exports. Soybean ending stocks are projected at 280 million bushels, down 14 percent from the revised 1992/93 carryover of 8.8 million tons (325 million bushels).

Season-average prices for soybeans and soybean oil in 1993/94 are projected higher based on a drawdown in soybean ending stocks, while soybean meal prices are projected to average slightly below the 1992/93 level.

Global oilseed changes for 1992/93 are highlighted by upward revisions in soybean production for Brazil and India. These gains for soybeans are partially offset by reductions in foreign production of other oilseeds. Foreign demand prospects are somewhat stronger this month, helped by small upward revisions for soybean meal use in the FSU, Mexico and the EC. Most of the larger Brazilian production was added to stocks, increasing 1993/94 supply availabilities. For the United States, 1992/93 soybean crush and exports are revised up slightly this month.

COTTON

Early-season prospects for 1993/94 point to a fairly close balance between world production and consumption. Output is projected to rebound about 6 percent next season to 87.5 million bales, assuming yields recover to more normal levels in several major producers hit by weather and insect problems in 1992/93. Use is projected to gain about 3 percent to 87 million bales, reflecting further increases in major producing countries and possibly some recovery in Russia. Growth in global trade--placed at about 2 percent--may lag consumption growth due to continued sluggish use in major importing countries. World ending stocks are projected up slightly to 38.8 million bales.

U.S. cotton prospects for 1993/94 feature sharply larger stocks. Based on farmers' planting intentions, average abandonment and trend yields, production is projected at 17.5 million bales, 8 percent above the 1992 crop. Total use is expected to expand nearly 5 percent, with mill use projected at 10.3 million bales and exports at 6 million. Ending stocks are projected to increase about 30 percent to 5.7 million bales.

This month's global cotton outlook for 1992/93 is highlighted by modest downward revisions for production, consumption and stocks. Output is estimated at 82.5 million bales, 1 percent below a month ago, reflecting reduced crop estimates for Brazil, Argentina, Greece and Tajikistan. World consumption also is trimmed slightly to 84.4 million bales, reflecting downward revisions for Russia and Greece. Global trade is pegged at about 26.5 million bales, nearly one-fifth above a month earlier, reflecting for the first time the addition of an estimated 4 million bales of trade among the 12 countries of the former USSR and the 3 Baltic States. With continuing intense competition from abroad, particularly Uzbekistan, U.S. export prospects are shaved 2 percent to 5.7 million bales. Indicated world ending stocks of 38.5 million bales are slightly below last month.

SUGAR

U.S. sugar production in fiscal year 1992/93 is estimated at 7.66 million short tons, raw value, down 40,000 tons from last month, mainly because of a lower estimate for Florida. Sugar production for 1993/94 is projected to decline about 1 percent to 7.6 million tons. A slight increase in cane sugar production, based on anticipated normal weather in Florida and Louisiana, does not offset a lower beet sugar production projection based on average sugar recovery. Domestic deliveries in 1993/94 are projected to increase 1.9 percent, close to the average 5-year growth rate.

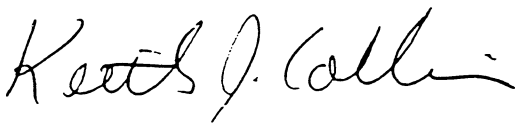

The tariff rate import quota for sugar has been extended to end on September 30, 1994 instead of September 30, 1993. The quota for the 2-year period will be 2.5 million short tons, raw value, an increase from 1,357,000 tons for the previous 1-year quota. Some of the quota sugar arrivals previously expected in 1992/93 are likely to arrive in 1993/94.

LIVESTOCK, POULTRY AND DAIRY

The red meat production forecasts are unchanged from last month, but strong prices and good returns to broiler producers are resulting in a little higher output than anticipated. The milk supply, use and price forecasts are little changed from last month.

The export outlook for red meats in 1993 has weakened. Beef exports to Korea and Mexico likely will fall short of previous expectations. Prospects for U.S. pork exports have been dimmed by strong U.S. hog prices, large pork supplies and sharply lower hog prices in Denmark, and weaker exports to Mexico. The poultry meat export forecast, however, is up slightly as shipments to many markets continue strong.

APPROVED:

ACTING SECRETARY OF AGRICULTURE

EXPLANATORY NOTES. This report presents USDA's initial assessment of agricultural supply and demand and price prospects for the 1993/94 season. Projections for U.S. and world crop production and use are based on economic analysis, trends and judgement. Because planting of spring crops is still underway in the Northern Hemisphere and remains several months away in the Southern Hemisphere, early-season projections are highly tentative. Substantial variation may result from weather developments, economic activity and policy changes. National Agricultural Statistics Service (NASS) forecasts are used for U.S. winter wheat. For other U.S. crops, the March 31 NASS Prospective Plantings report is used for planted acreage, and methods used to project harvested acreage and yield are noted on each table. Reliability tables showing the historical accuracy of supply/use projections made during May are on pages 29-31.

Projections of imports for the former Soviet Union assume that sufficient international assistance will be available. For cotton, world imports and exports are adjusted to reflect trade among the 12 countries of the former USSR and three Baltics States, which are treated separately for the first time.

Note: Reliability calculations at end of report.

1/ Upland and extra-long staple; marketing year beginning August 1. Totals may not add due to rounding. 2/ Based on Bureau of Census data. 3/ Includes imports. 4/ Reflects the difference between ending stocks based on Bureau of Census data and the previous season's supply less total use. 5/ Domestic measure, cents per pound; metric measure, dollars per kilogram. 1992/93 prices are weighted averages for August-November; not a projection for the marketing year. 6/ USDA is prohibited from publishing cotton price projections. *Planted area reported in March 31 Prospective Plantings. Projected harvested area based on 1983-92 average acreage abandonment, by State, of 8 percent. Projected yield based on 1973-92 State trends, weighted by area.

Stocks to use ratio	15.3	16.8	15.3	12.0

1/ Fiscal years beginning Oct. 1. Puerto Rico not included.
2/ Historical data are from USDA/ASCS, "Sweetener Market Data."
3/ U.S. beet sugar production forecast for 1993/94 based on intended plantings in the March 31 "Prospective Plantings" and forecasts of other factors based on historical averages. Percent of planted area harvested is the 1988-92 average, excluding the high and low years. Beet yield is the 1983-92 average, excluding 2 highest and lowest years. Sugar recovery from beets, excluding net additional sugar from the desugarization of molasses is the 1988-92 average excluding the high and low years. Net additional sugar from the desugarization of molasses is forecast at 217,000 STRV. The result of this calculation, 4.17 million STRV, is rounded to 4.2 million STRV.
4/ The U.S. cane sugar production forecast for 1993/94 is based on office estimates of sugarcane area harvested for sugar in each state which reflect information from producers, processors, and other knowledgeable sources; and sugarcane yields and sugar recovery from cane estimated to be equal to the 1988-92 average, excluding the highest and lowest years for each state. 5/ Actual arrivals under the quota with late entries and quota overfills assigned to the fiscal year in which they actually arrived. The 2 year tariff rate quota for 1992/93 and 1993/94 is set at 2.5 million short tons.
6/ Quota-exempt imports (for reexport, for polyhydric alcohol, from Canada, and high duty), plus arrivals from Puerto Rico. Imports of flavored sugar and products with very high sugar content such as tea mixes, gelatin, and miscellaneous food preparations are not included. The sugar content of imports of these products is estimated at 110,000 STRV in 1991/92. 7/ Includes shipments to Puerto Rico. Other exports are mostly reexports. 8/ Transfer to sugar containing products for reexport, for polyhydric alcohol, and feed. 9/ CCC disposal for domestic nonfood use, and residual.

Cheese	0	99	12	30	20
Nonfat dry milk	28	334	115	230	275
Dry whole milk	0	0	24	50	35

Note: Totals may not add due to rounding. Reliability calculations at end of report. 1/ Marketing year beginning October 1. 2/ Milk equivalent, milkfat basis. 3/ Includes products exported under the Dairy Export Incentive Program. 4/ Milk of average fat test. Does not reflect any deductions from producers as authorized by legislation.

Note: Tables on pages 29-31 present a 12-year record of the differences between the May projection and the final estimate. Using world wheat production as an example, changes between the May projection and the final estimate have averaged 14.1 million tons (2.7%) ranging from -25.1 to 20.6 million tons. The May projection has been below the estimate 7 times and above 5 times.

1/ See pages 29 and 30 for record of reliability for U.S. wheat, rice, soybeans and cotton. 2/ Final estimate for 1981/82-91/92 is defined as the first November estimate following the marketing year and for 1992/93 last month's estimate. 3/ May not total 12 for crops and 11 for animal production if projection was the same as the final estimate. 4/ Calendar years 1982 thru 1992 for meats and eggs; October-September years 1981/82 thru 1991/92 for milk. Final for animal products is defined as latest annual production estimate published by NASS.
