WASDE-281 - August 11, 1993

HIGHLIGHTS

U.S. corn and soybean production prospects have further deteriorated over the past month because of excessive rain and flooding in the western Corn Belt. The 1993/94 soybean crop is forecast at 1.9 billion bushels, 4 percent below last month's indication and 13 percent below 1992/93. The corn crop of 7.4 billion bushels is 5 percent below last month and down 22 percent from 1992/93. Projected higher prices and lower supplies this month will lead to lower use; so, projected 1993/94 carryover stocks of soybeans of 190 million bushels and corn of 1.4 billion are not down as much as production.

Rains and floods also have contributed to lower prospective wheat and sugar beet crops. U.S. 1993/94 ending wheat stocks of 696 million bushels are down 45 million this month. But weather has favored the cotton crop and stocks are projected to rise to 6.6 million bales.

The forecast increase in 1993 total U.S. meat production of around 2 percent is slightly above last month. The first projection for 1994 meat production suggests expansion of about 3.5 percent, although higher feed costs are expected to trim producers' returns.

GRAINS

WHEAT. Projected 1993/94 global wheat supplies are up substantially from last month, led by larger prospective crops in China, Kazakhstan and Russia. Prospective imports are down 2 million tons for China and 1 million for Russia, while Kazakhstan's exports are up 1 million. The lower projected world demand reduces prospective exports for the United States, the EC and Canada. Despite increased consumption, 1993/94 ending stocks are up from last month and the highest since 1990/91.

Forecast 1993/94 U.S. wheat production is down 45 million bushels from last month because of lower prospective area and yields. Projected total use is unchanged as larger domestic use offsets lower prospective exports.

COARSE GRAINS. Projected global 1993/94 supply, use and ending stocks are down from last month, largely because of lower U.S. crops. Foreign production and stocks, however, are up from last month, led by gains in Russia, China, the EC and Canada. Projected 1993/94 global ending stocks are down from last month and the smallest since 1989/90.

U.S. 1993/94 corn production is forecast at 7,423 million bushels, down 427 million from last month's projection and 2.1 billion below last year's record crop. Sorghum and oat production are also down from last month, leaving total feed grain production 5 percent below last month and 21 percent below 1992/93. With the smaller corn crop, projected domestic use of corn is down 150 million bushels and exports are down 25 million. Thus, projected 1993/94 ending stocks are down 221 million bushels from last month. The projected price range for corn is up 15 cents on each end to $2.15 to $2.55 per bushel.

RICE. Projected 1993/94 global rice production, consumption and ending stocks are up from last month, while trade is nearly unchanged. Larger projected crops for India and Vietnam account for most of the increase in production. The forecast 1993/94 U.S. crop is up slightly from last month because of higher yields, but down 5 percent from 1992/93. With projected 1993/94 use unchanged, the larger crop means higher 1993/94 ending stocks. The projected price range is up 25 cents on each end to $4.75 to $6.25 per cwt.

OILSEEDS

World oilseed production for 1993/94 is projected at a record 226.4 million tons, down slightly from last month and from 1992/93. Downward revisions for U.S. soybean and peanut crops this month are partly offset by increases in U.S. cottonseed and by prospective larger oilseed crops in Brazil and Canada. Foreign oilseed output is projected at 164.6 million tons, up nearly 4 percent from 1992/93. U.S. oilseed output is forecast at 61.8 million tons, 3 percent below a month ago and 10 percent below last year's record. Excessive moisture and flooding in the Midwest have contributed to both area and yield losses, mainly for soybeans, while drought in the Southeast has hurt yields for peanuts and soybeans. U.S. soybean production is forecast at 51.7 million tons, off 4 percent from last month and down 13 percent from last year.

Global oilseed use in 1993/94 is down less than 1 percent from last month, but 1 percent above 1992/93. However, stocks will tighten because of the sharp production decline in U.S. soybeans. Partly offsetting the drop in the United States are soybean output gains in South America and China and gains in Canadian rapeseed. Furthermore, the sharp increase in the protein-grain price ratio in the EC is likely to encourage significant substitution of other feedstuffs for soybean meal. Consequently, U.S. crush and exports are projected to be rationed back more easily in 1993/94 than in past short crop years. Lack of demand strength is much more apparent for soybean meal than for soybean oil.

U.S. ending 1993/94 soybean stocks are projected at 190 million bushels, off 16 percent from last month and 34 percent from 1992/93, to the lowest level since 1988/89.

Season-average prices for soybeans and products are projected higher this month, with soybean prices ranging from $6.00 to $7.30, up from $5.75 to $7.00 last month and $5.60 per bushel in 1992/93. Soybean oil prices are projected at 22.0 to 26.0 cents per pound. Soybean meal prices are forecast at $190 to $220 per short ton, up only slightly from last month.

COTTON

Global cotton prospects for 1993/94 production, consumption and trade are trimmed this month, leaving ending stocks virtually unchanged from last month. Output is projected at 85.4 million bales, less than 1 percent below last month, as a smaller crop in China more than offsets an upward revision for the United States. World use is projected at 87.1 million bales, also slightly below July indications, reflecting downward adjustments for China and Russia. With smaller prospective consumption in these countries, global trade is revised down 1 percent to nearly 27 million bales. World ending stocks are placed at 35.8 million bales, about the same as indicated in July but 5 percent below the beginning level.

The U.S. cotton outlook for 1993/94 is highlighted by prospects for sharply larger production and stocks. The crop is forecast at a near-record 18.5 million bales, up 4 percent from a month earlier and 14 percent above 1992. Total cotton use of 16.6 million bales is unchanged from last month. With a larger crop relative to prospective use, stocks are expected to build to 6.6 million bales, 14 percent above a month earlier and nearly 43 percent above 1992/93 ending stocks.

SUGAR

U.S. sugar production in fiscal year 1993/94 is projected at 7.55 million short tons, raw value, down 50,000 tons from last month. The revised sugar projection is based on today's sugar beet and sugarcane production forecasts. Beet sugar accounts for all of the reduction, largely because of losses caused by flooding in Minnesota. Cane sugar production in 1992/93 was revised upward to account for higher-than-anticipated production in Hawaii. Imports of sugar under the reexport program in 1992/93 are revised higher. The substitution of sugar for HFCS because of flood-related problems in the Midwest is not sufficient to alter forecast 1992/93 sugar deliveries.

Marketing allotments for fiscal year 1992/93 were imposed on July 1, 1993. The final allotment for beet sugar is 188,000 tons less than estimated beet sugar production. Exports of sugar in excess of allotments are forecast at 30,000 tons. Thus, about 158,000 tons of 1992/93 ending stocks will consist of beet sugar in excess of allotments. If these stocks are excluded, the stocks-to-use ratio in 1992/93 is 14.6 percent. No allotments are assumed for 1993/94 projections.

LIVESTOCK, POULTRY AND DAIRY

U.S. total red meat and poultry production in 1994 is projected to increase about 3.5 percent from 1993's anticipated level. Production likely will increase nearly 2 percent this year. Both beef and pork production, which are expected to be little changed from a year earlier in 1993, are projected to increase around 3 percent in 1994. The largest year-over-year gains in beef and pork output in 1994 will be in the first half of the year. Broiler production probably will increase around 5 percent this year and another 5 percent in 1994, as producers have continued to show positive net returns. Turkey producers, however, have had poor returns and this year's output will be up less than 2 percent. A similar increase is projected for 1994. Egg production is projected to increase about 1 percent in 1994.

This year's beef and pork exports likely will slip slightly from a year earlier, but a modest rebound is projected for 1994. Poultry meat exports are showing strong gains again this year and further increases are projected for 1994. Beef imports in 1994 are projected to decline slightly while pork imports continue near the 1993 level.

Cattle, hog and broiler prices are projected to be slightly weaker in 1994 than this year. Continued growth in the economy and larger exports will help support prices. Turkey prices are expected to remain near the 1993 average. Egg prices are projected lower for 1994.

U.S. milk production is expected to increase nearly 2 percent in 1993/94, while commercial use is rising around 1-1/2 percent. CCC net removals on a milkfat basis are projected to be little changed from the anticipated 1992/93 level, but, on a skim solids basis, they likely will increase sharply. The all-milk price will average around $12.75 per cwt in 1992/93 and is projected to decline in 1993/94.

Ending stocks	12.9	14.9	15.1	14.0

Note: Totals may not add due to rounding. Reliability calculations at end of report. 1/ Marketing year beginning August 1. 2/ Includes the following quantities of broken kernel rice (type undetermined) not included in estimates of beginning stocks by type (in mil. cwt): 1991/92, 1.4; 1992/93, 1.4; 1993/94, 1.4. 3/ Residual includes unreported use, processing losses and estimating errors. Use by type may not add to total rice use because of the difference in brokens between beginning and ending stocks. 4/ Marketing-year weighted average price received by farmers. 5/ Includes imports.
* For July: Area planted and area harvested as reported in June Acreage report. Projected yield is derived from simple linear trend fit for 1963-92.

Note: Reliability calculations at end of report.

1/ Marketing year beginning September 1 for soybeans; October 1 for soybean oil and meal. 2/ Prices: Soybeans, marketing year weighted average price received by farmers, for Oil, simple average of crude soybean oil, Decatur, for Meal, simple average of 48 percent, Decatur. 3/ Based on October year crush of 1,270 million bushels. * Planted and harvested acres reported in the June 30 acreage report have been adjusted because of excessive moisture and flooding in the upper midwest region. Crop yields have been adjusted also to reflect lateness of planting and adverse crop conditions.

NOTE: Reliability calculations at end of report.

1/ Upland and extra-long staple; marketing year beginning August 1. Totals may not add due to rounding. 2/ Based on Bureau of Census data. 3/ Includes imports. 4/ Reflects the difference between ending stocks based on Bureau of Census data and the previous season's supply less total use. 5/ Domestic measure, cents per pound; metric measure, dollars per kilogram. 1992/93 prices are weighted averages for August-March; not a projection for the marketing year. 6/ USDA is prohibited from publishing cotton price projections.

*Planted area reported in June 30 Acreage. Harvested area based on 1983-92 average acreage abandonment, by State, of 8 percent. Yield based on 1973-92 State trends, weighted by area.

NOTE: Reliability calculations at end of report.

1/ Marketing year beginning August 1. Totals may not add exactly and trade may not balance due to rounding and other factors. 2/ For foreign countries, reflects cotton lost or destroyed in the marketing channel; for the United States, reflects the difference between ending stocks based on Bureau of Census data and implicit stocks based on supply less total use. 3/ World trade expanded to include estimated trade among the 12 Republics of the former USSR and three Baltic States of 5.45 million bales in 1991/92 and 3.95 million in 1992/93. 4/ Less than 5000 bales. 5/ Includes Egypt, Sudan, and Turkey in addition to the countries and regions listed. 6/ Benin, Burkina Faso, Cameroon, Central African Republic, Chad, Cote d'Ivoire, Mali, Niger, Senegal, and Togo. 7/ Argentina, Australia, Brazil, and Paraguay. 8/ Hong Kong, Indonesia, Japan, South Korea, Taiwan, and Thailand.

NOTE: Reliability calculations at end of report.

1/ Marketing year beginning August 1. Totals may not add exactly and trade may not balance due to rounding and other factors. 2/ For foreign countries, reflects cotton lost or destroyed in the marketing channel; for the United States, reflects the difference between ending stocks based on Bureau of Census data and implicit stocks based on supply less total use. 3/ World trade expanded to include estimated trade among the 12 Republics of the former USSR and three Baltic States of 4.2 million bales. 4/ Less than 5000 bales. 5/ Includes Egypt, Sudan, and Turkey in addition to the countries and regions listed. 6/ Benin, Burkina Faso, Cameroon, Central African Republic, Chad, Cote d'Ivoire, Mali, Niger, Senegal, and Togo. 7/ Argentina, Australia, Brazil, and Paraguay. 8/ Hong Kong, Indonesia, Japan, South Korea, Taiwan, and Thailand.

Stocks to use ratio 10/	15.3	16.3	12.2	12.4

1/ Fiscal years beginning Oct. 1. Puerto Rico not included. 2/ Historical data are from ASCS, "Sweetener Market Data." 3/ The 1993/94 beet sugar production forecast is based on forecast sugar beet production in the August 11 "Crop Production" report. Sugar recovery from beets, excluding net additional sugar from the desugarization of molasses, is the 1988-92 average excluding the high and low years. Net additional sugar from desugarization of molasses is forecast at 217,000 STRV. 4/ The 1993/94 cane sugar production forecast is based on forecast sugarcane production in each state in the August 11 "Crop Production" report, less estimates of production for seed. Hawaii is adjusted to obtain a fiscal year estimate. Sugar recovery from cane is the 1988-92 average for each state, excluding the high and low years. 5/ Actual arrivals under the quota with late entries and quota overfills assigned to the fiscal year in which they actually arrived. The 2-year tariff rate quota for 1992/93 and 1993/94 is 2.5 million STRV. 6/ Quota exempt imports (for reexport, for polyhydric alcohol, from Canada, and high-duty), plus arrivals from Puerto Rico. Imports of flavored sugar and other products with very high sugar content are not included. The estimated sugar content of imports of selected sugar-containing products in 1991/92 was about 175,000 STRV, including 70,000 tons entered under Section 22 import quotas. 7/ Includes shipments to Puerto Rico. Other exports are mostly reexports. 8/ Transfer to sugar containing products for reexport, for polyhydric alcohol, and feed. 9/ CCC disposal for domestic nonfood use, and residual. 10/ Ending stocks for 1992/93 include about 158,000 tons of sugar in excess of 1992/93 marketing allotments (188,000 tons of beet sugar production in excess of allotments, less forecast exports of 30,000 tons). If excess stocks are excluded, the stocks to use ratio is 14.6 percent.

Does not reflect any deductions from producers as authorized by legislation.

Note: Tables on pages 29-31 present a 12-year record of the differences between the August projection and the final estimate. Using world wheat production as an example, changes between the August projection and the final estimate have averaged 13.6 million tons (2.6%) ranging from -32.1 to 10.7 million tons. The July projection has been below the estimate 7 times and above 5 times.

1/ See pages 29 and 30 for record of reliability for U.S. wheat, rice, soybeans and cotton. 2/ Final estimate for 1981/82-91/92 is defined as the first November estimate following the marketing year and for 1992/93 last month's estimate. 3/ May not total 12 for crops and 10 for animal production if projection was the same as the final estimate. 4/ Calendar years 1983 thru 1992 for meats and eggs; October-September years 1982/83 thru 1991/92 for milk. Final for animal products is defined as latest annual production estimate published by NASS.
