Foreign Agricultural Service

Approved by the World Agricultural Outlook Board

WASDE-284 - November 9, 1993

HIGHLIGHTS

Projected 1993/94 carryover stocks of most U.S. crops are sharply below last month, mainly reflecting smaller crops. Also, weather has taken a further toll on grain crops in the former Soviet Union (FSU).

U.S. corn stocks next September 1 are projected at 881 million bushels, well below last month's 1,085 million and less than one-half of beginning stocks of 2,113 million. Expected soybean stocks of 170 million bushels are down from 205 million last month. Cotton stocks are placed at 4.9 million bales, down from 5.4 million last month, as crop losses continue to mount.

Prospective sugar stocks are considerably tighter this month, in line with a reported smaller sugar crop and October 1, 1993 sugar stocks; and are well below last month's estimate. Projected rice carryover stocks are down again this month, mainly because of a smaller crop.

Projected wheat stocks are down slightly this month because of higher feed and residual use. Meat production prospects for 1994 are little changed.

GRAINS

WHEAT. Global 1993/94 projected wheat production is down from last month, led by smaller crops in Kazakhstan, Russia and the EC. Also, this month's drop in projected output has pushed 1993/94 production below year-earlier levels. Global supplies, however, remain slightly above 1992/93 as the larger carryin stocks more than offset the smaller crop. Supplies are relatively large in the major exporting countries and many of the major importers. Thus, world trade remains weak and well below 1992/93. Despite the drop in the projected crop for Russia, forecast imports are down slightly from last month because of lower expected consumption and limited financial resources. Because of the smaller crop, projected exports are down 1 million tons for Kazakhstan.

Projected U.S. 1993/94 ending stocks are down 15 million bushels from last month because of the larger prospective feed and residual use. A sharply lower U.S. corn crop and higher prices are expected to lead to more wheat feeding, both in the current June-May marketing year and next summer (the first quarter of the 1994/95 wheat marketing year). Projected imports also are up from last month as the higher prices are expected to spur more wheat imports for feeding. The projected wheat price range is up 10 cents on the low end and 5 cents on the high end to $2.85 to $3.10 per bushel.

COARSE GRAINS. This month's changes in the 1993/94 global supply and use projections are dominated by the sharply lower U.S. corn crop. Foreign output is down as lower crops in Russia, Kazakhstan and India more than offset a 3-million-ton increase in projected corn output in China. With the smaller U.S. corn crop and exports, projected exports are up 2 million tons for China and 500,000 for the EC. The sharply lower 1993/94 ending stocks of corn are expected to push global coarse grain ending stocks to their lowest level since 1983/84.

U.S. 1993/94 corn production is forecast at 6.5 billion bushels, 459 million below last month and almost 3 billion below last year's record. With the smaller crop, projected exports are down by

50 million bushels and domestic use by 200 million. Even with less use, projected 1993/94 ending stocks of corn are down 204 million bushels from last month, 1.2 billion below the carryin level, and the lowest since 1975/76. The projected price range for corn is up 15 cents on each end to $2.35 to $2.75 per bushel.

RICE. Projected global 1993/94 rice supply, use and ending stocks are down from last month, while trade is up. The increase in 1993/94 trade reflects mostly increased requirements for Japan and the Philippines. Smaller global output is primarily because of projected declines for Italy, Japan, the Philippines and Thailand. Japan's 1993/94 crop is projected at 7.0 million metric tons (milled), down 500,000 tons from last month. Imports by Japan for 1993/94 (November-October) are projected at 2.0 million tons, up 400,000 from last month. U.S. 1993/94 output and exports are forecast down from last month, resulting in slightly lower projected ending stocks. The 1993/94 price range is up $0.50 per cwt on each end to $8.00 to $9.50.

OILSEEDS

World oilseed production in 1993/94 is projected at 223.5 million metric tons, down 1.2 million from last month and 3.1 million tons below last year. Foreign production in 1993/94 is placed at around 164.8 million tons, up 0.6 million tons from last month. Improved prospects for China's peanut crop and Brazil's soybean crop more than offset a reduction in Pakistan's cottonseed production and in sunflowerseed for the FSU and Argentina. U.S. oilseed production is projected at 58.8 million tons, down 1.8 million from last month and off nearly 10 million from last year. Soybean production is down 1.6 million tons this month to 49.9 million, or 1,834 million bushels.

U.S. oilseed domestic use prospects are down slightly this month, reflecting a smaller soybean crush of 1,225 million bushels. U.S. soybean exports are projected at 625 million bushels, off 15 million from last month and 19 percent below last season.

U.S. soybean meal and oil export projections are both reduced this month, mainly in response to tightening availabilities. Lowered production of both soybean meal and oil are based on reduced crush and crushing extraction rate estimates. Lower carryin stocks also contribute to a sharp drawdown in 1993/94 soybean oil ending stocks to 1.13 billion pounds, the lowest since 1985/86.

Soybean prices are forecast to range between $6.00 to $7.00 per bushel, up 4 percent from last month and up from $5.60 per bushel last season. Soybean meal prices are forecast at $190 to $225 per short ton and soybean oil prices are forecast to range from 23.0 to 26.5 cents per pound, both up from last month.

COTTON

Global cotton stocks for 1993/94 are revised up slightly this month, reflecting a bigger supply and smaller consumption. The larger supply stems from an upward adjustment in the carryin, resulting primarily from a downward revision in China's 1992/93 consumption. Production is projected at 82.6 million bales, virtually unchanged from last month, as larger expected output in China, Greece, Argentina and Paraguay more than offsets reduced prospects in Pakistan, the United States, Azerbaijan, Iran and Tanzania. Global use is projected at 86.7 million bales, slightly below October indications, while world trade is largely unchanged. Ending stocks are projected at 34 million bales, up slightly.

This month's U.S. cotton outlook for 1993/94 features smaller production and stocks. The 1993 crop is revised down 4 percent to 16.3 million bales. While exports are revised down slightly to 5.9 million bales, the mill use forecast is unchanged at 10.3 million. U.S. ending stocks are projected at 4.9 million bales, down from 5.4 million last month.

SUGAR

U.S. sugar production in fiscal year 1993/94 is projected at 7.4 million short tons, raw value, down 60,000 tons from last month. The revised projection is based on National Agricultural Statistics Service sugar beet and sugarcane production forecasts. Beet sugar production is expected to be down 50,000 tons from last month's projection, mostly because of lower sugar beet yields in Minnesota, North Dakota, California and Michigan. Lower yields in Texas account for a 10,000-ton reduction in the cane sugar production forecast.

Revised 1992/93 production, imports, deliveries, and ending stock estimates are based on fiscal-year data collected by the Agricultural Stabilization and Conservation Service from sugar mills, sugar beet factories, and sugar refineries. These data imply unaccounted-for use or over-reported supply of 169,000 tons. Domestic deliveries in 1992/93 increased 2.7 percent. Deliveries in 1993/94 are forecast to increase 1.7 percent, slightly below the 5-year average growth rate. Ending stocks for 1992/93 included approximately 186,000 tons of beet sugar in excess of marketing allotments, which were in force from July through September 1993. Excluding these excess stocks, the stocks-to-use ratio in 1992/93 was 14.5 percent. Ending stocks in 1993/94 are forecast at 1.0 million tons, down 200,000 tons from last month's forecast. Production and deliveries in 1991/92 also are revised.

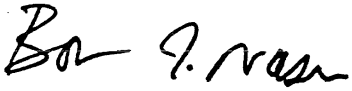

LIVESTOCK, POULTRY AND DAIRY

U.S. total meat production is forecast to increase about 1 percent in 1993 and around 3 percent in 1994. Red meat production forecasts are little changed from a month ago. Recently, egg sets and chicks placed for broiler production have been larger than anticipated. This will boost late 1993 and early 1994 broiler production above levels previously forecast. Turkey production is falling short of expectations and the forecast level of output is trimmed slightly.

The milk production forecast is down slightly from last month. Higher feed costs likely will hold down feeding rates and a squeeze on some producers' returns may result in fewer cows than previously forecast. The net removal forecast for 1993/94 on a milkfat basis is down from last month. On a skim-solids basis, however, commercial disappearance continues weak and the surplus removal estimate on a skim solids basis is higher than a month ago. The milk price forecast is up slightly from a month ago but the annual average is still expected to fall short of the year-earlier level.

The milk production forecast assumes that bST will be available for use by producers in February 1994, following approval by the Food and Drug Administration on November 5, 1993.

Ending stocks	12.9	15.8	8.7	7.7

Note: Totals may not add due to rounding. Reliability calculations at end of report. 1/ Marketing year beginning August 1. 2/ Includes the following quantities of broken kernel rice (type undetermined) not included in estimates of beginning stocks by type (in mil. cwt): 1991/92- 1.4; 1992/93- 1.5; 1993/94- 2.0. 3/ Residual includes unreported use, processing losses and estimating errors. Use by type may not add to total rice use because of the difference in brokens between beginning and ending stocks. 4/ Marketing-year weighted average price received by farmers. 5/ Includes imports. 6/ Exports by type of rice are estimated.

Note: Reliability calculations at end of report.

1/ Marketing year beginning August 1. Totals may not add exactly and trade may not balance due to rounding and other factors. 2/ For foreign countries, reflects cotton lost or destroyed in the marketing channel; for the United States, reflects the difference between ending stocks based on Bureau of Census data and implicit stocks based on supply less total use. 3/ World trade expanded to include estimated trade among the 12 Republics of the former USSR and three Baltic states of 5.45 million bales in 1991/92 and 3.95 million in 1992/93. 4/ Less than 5000 bales. 5/ Includes Egypt, Sudan, and Turkey in addition to the countries and regions listed. 6/ Benin, Burkina Faso, Cameroon, Central African Republic, Chad, Côte d'Ivoire, Mali, Niger, Senegal, and Togo. 7/ Argentina, Australia, Brazil, and Paraguay. 8/ Hong Kong, Indonesia, Japan, South Korea, Taiwan, and Thailand.

Note: Reliability calculations at end of report.

1/ Marketing year beginning August 1. Totals may not add exactly and trade may not balance due to rounding and other factors. 2/ For foreign countries, reflects cotton lost or destroyed in the marketing channel; for the United States, reflects the difference between ending stocks based on Bureau of Census data and implicit stocks based on supply less total use. 3/ World trade expanded to include estimated trade among the 12 Republics of the former USSR and three Baltic states of 4.0 million bales. 4/ Less than 5000 bales. 5/ Includes Egypt, Sudan, and Turkey in addition to the countries and regions listed. 6/ Benin, Burkina Faso, Cameroon, Central African Republic, Chad, Côte d'Ivoire, Mali, Niger, Senegal, and Togo. 7/ Argentina, Australia, Brazil, and Paraguay. 8/ Hong Kong, Indonesia, Japan, South Korea, Taiwan, and Thailand.

Domestic food use	8,727	8,912	9,060	9,095
Other 8/	99	155	140	130
Miscellaneous 9/	20	169	0	0
Use, total	9,476	9,722	9,770	9,805
Ending stocks 2/10/	1,450	1,599	1,214	1,009
Stocks to use ratio 10/	15.3	16.5	12.4	10.3

1/ Fiscal years beginning Oct. 1. Puerto Rico not included. 2/ Historical data are from ASCS, "Sweetener Market Data." 3/ The 1993/94 beet sugar production forecast is based on forecast sugar beet production in the Nov 9 "Crop Production" report. Sugar recovery from beets is an Interagency Sugar Estimates Committee forecast. 4/ The 1993/94 cane sugar production forecast is based on forecast sugarcane production in each state in the Nov 9 "Crop Production" report, less estimates of production for seed. Hawaii is adjusted to obtain a fiscal year estimate. Sugar recovery from cane is the 1988-92 average for each state, excluding the high and low years. 5/ Actual arrivals under the quota with late entries and quota overfills assigned to the fiscal year in which they actually arrived. The 2-year tariff rate quota for 1992/93 and 1993/94 is 2.5 million STRV. 6/ Quota exempt imports (for reexport, for polyhydric alcohol, from Canada, and high-duty). Imports of flavored sugar and other products with very high sugar content are not included. The estimated sugar content of imports of selected sugar-containing products in 1991/92 was about 175,000 STRV, including 70,000 tons entered under Section 22 import quotas. 7/ Includes shipments to Puerto Rico. Other exports are mostly reexports. 8/ Transfer to sugar containing products for reexport, for polyhydric alcohol, and feed. 9/ CCC disposal for domestic nonfood use, and residual. 10/ Ending stocks for 1992/93 include about 186,000 tons of sugar in excess of 1992/93 marketing allotments. If excess stocks are excluded, the stocks to use ratio is 14.5 percent.

Note: Tables on pages 29-31 present a 12-year record of the differences between the November projection and the final estimate. Using world wheat production as an example, changes between the November projection and the final estimate have averaged 6.6 million tons (1.3%) ranging from -18.1 to 7.2 million tons. The November projection has been below the estimate 8 times and above 4 times.

1/ See pages 29 and 30 for record of reliability for U.S. wheat, rice, soybeans and cotton. 2/ Final estimate for 1981/82-91/92 is defined as the first November estimate following the marketing year and for 1992/93 last month's estimate. 3/ May not total 12 for crops and 10 for animal production if projection was the same as the final estimate. 4/ Calendar years 1983 thru 1992 for meats and eggs; October-September years 1982/83 thru 1991/92 for milk. Final for animal products is defined as latest annual production estimate published by NASS.
