WORLD AGRICULTURAL SUPPLY AND DEMAND ESTIMATES

United States Department of Agriculture

Washington, D.C.

Approved by the World Agricultural Outlook Board

WASDE-291 - June 9, 1994

NOTE: This report presents USDA's assessment of agricultural supply and demand prospects and U.S. price prospects for the 1994/95 season. Projections are based on economic analysis, trends and judgment.

Because planting of spring crops is still underway in the Northern Hemisphere and remains several months away in the Southern Hemisphere, early-season projections are highly tentative. Substantial variation may result from weather developments, economic activity and policy changes. National Agricultural Statistics Service (NASS) forecasts are used for U.S. winter wheat. For other U.S. crops, the March 31 NASS Prospective Plantings report is used for planted acreage, and methods used to project harvested acreage and yield are noted on each table.

Projected 1994/95 U.S. wheat and barley imports do not reflect any restrictions on U.S. grain imports as a result of U.S. action under Article 28 of GATT or any other actions.

HIGHLIGHTS

WHEAT: Projected U.S. 1994/95 ending stocks are down 8 million bushels from last month as reduced carryin stocks and higher food use more than offset larger forecast production. The survey-based forecast of winter wheat output is up 17 million bushels from last month. Forecast food use for 1993/94 and for 1994/95 are each up 15 million bushels because of an upward revision in mill grind by the Bureau of Census for calendar years 1992 and 1993 and the first quarter of 1994.

Global 1994/95 supply and use projections are little changed from last month, but ending stocks are down more than 2 million tons. Higher forecast 1993/94 EU consumption and lower carryout stocks are largely responsible.

COARSE GRAINS: Projected U.S. 1994/95 feed grain output and use are unchanged from last month, but beginning and ending stocks are up marginally because of larger forecast 1993/94 imports of corn and barley.

Projected global 1994/95 supply, use and ending stocks are up slightly from last month, mainly because of larger corn production, use and stocks for Brazil for 1993/94 and 1994/95.

RICE: U.S. domestic and residual (brewer's) use is raised slightly for 1993/94 and 1994/95. The projected price range for 1993/94 is lowered 30 cents on the high end to $8.25 to $8.45 per cwt. Foreign 1994/95 rice production, which is based largely on yield-trend analysis, is projected lower because of a downward revision in China's 1993/94 crop (based on recently published official statistics). Global ending stocks are lowered for both 1993/94 and 1994/95.

OILSEEDS: U.S. soybean and product exports for 1993/94 are forecast slightly below a month ago, while projected soybean exports for 1994/95 are higher. Changes for both years reflect accelerated 1993/94 exports of soybean meal by Brazil. China's official data indicate much larger 1993/94 crops of soybeans and peanuts. U.S. soybean crush prospects are increased for both 1993/94 and 1994/95 as domestic meal offtake remains strong. The larger crush adds to U.S. soybean oil inventories, although domestic use is increased slightly for 1994/95. Generally strong U.S. meal demand also prompted an increase in rapeseed meal imports.

U.S. soybean ending stocks are reduced for 1994/95. Upward revisions in exports and domestic crush more than offset slightly higher carryin stocks. U.S. soybean prices for 1994/95 are projected above last month at $5.35 to $6.45 per bushel, while meal prices are up to $155 to $190 per short ton. Projected soybean oil prices are reduced to 24.0 to 29.0 cents per pound.

SUGAR: U.S. sugar production in fiscal year 1994/95 is projected at 7.67 million short tons, raw value, unchanged from last month, but up 2.1 percent from 1993/94. Sugar deliveries in 1994/95 are projected to increase 1.4 percent.

Beet sugar production for fiscal year 1993/94 is revised to 4.05 million tons, down 50,000 tons from the previous estimate. The revision is based on the crop-year estimate released today in USDA's Crop Production report. Beginning stocks for fiscal year 1993/94 are revised downward 54,000 tons due to a correction in stocks data reported to USDA. Ending stocks are also reduced, lowering the forecast September 30, 1994, stocks-to-use ratio to 12.5 percent.

LIVESTOCK, POULTRY, DAIRY: The U.S. meat production forecast for 1994 is increased this month as both beef and pork output are exceeding expectations. With larger output weighing on prices, steer and hog price forecasts for this spring and summer are lowered slightly. The poultry production outlook is little changed from last month but export prospects are brighter for 1994 and 1995.

The milk production forecast for 1993/94 is increased slightly as the number of cows has not declined as much as previously expected and output per cow is exceeding anticipated levels. This is expected to result in larger CCC net removals in 1993/94 than forecast last month; the commercial use forecast is unchanged. Milk prices declined more than anticipated last month. Prices this spring and summer likely will be lower than previously forecast. The outlook for 1994/95 is little changed from May.

APPROVED (8:30 a.m. release):

ACTING SECRETARY OF AGRICULTURE

****

The next issue of this report will be released on July 12, 1994.

This report was prepared by the Interagency Commodity Estimates Committees and approved by the World Agricultural Outlook Board, Gerald A. Bange, Acting Chairperson, (202) 720-8651. Contact committee chairpersons at (202) 720-9805.

1/ Fiscal years beginning Oct 1. Puerto Rico not included. 2/ Historical data are from ASCS, "Sweetener Market Data." 3/ Forecast for 1994/95 is based on intended plantings in the March 31 "Prospective Plantings." Forecasts of percent of area harvested and beet yield are equal to 1989-93 averages excluding the high and low years. Sugar recovery from beets--excluding net additional sugar from desugarization of molasses--is the projected linear trend of 1982-93 recoveries. Net additional sugar from molasses is forecast at 235,000 STRV. 4/ Forecast for 1994/95 is based on estimates of sugarcane area harvested for sugar in each state which reflect information from producers, processors, and other knowledgeable sources; and forecast sugarcane yields and sugar recovery from cane equal to the 1989-93 average excluding the high and low years for each state. 5/ Actual arrivals under the tariff rate quota with late entries and quota overfills assigned to the fiscal year in which they actually arrived. Estimated imports under quota in 1993/94 assume a shortfall of 40,000 tons from the 2-year, 2.5 million STRV quota for 1992/93 and 1993/94. The quota for 1994/95 has not been announced. 6/ Quota exempt imports (for reexport, for polyhydric alcohol, from Canada, and high-duty). 7/ Mostly reexports and shipments to Puerto Rico. 8/ Transfer to sugar containing products for reexport, for nonedible alcohol, and feed. 9/ Residual. 10/ Ending stocks for 1992/93 are lowered 54,000 tons to correct a reporting error.

Approved by the World Agricultural Outlook Board WASDE-291 - June 9, 1994

Note: See page 1 for analytical assumptions underlying 1994/95 projections.

COTTON HIGHLIGHTS

U.S. cotton prospects for 1994/95 are unchanged this month. While the 1994 crop is projected to rise 10 percent above the 1993 crop to 17.7 million bales, total use is expected to slightly exceed that of 1993/94, and ending stocks may remain below 4 million bales.

Global 1994/95 prospects, also unchanged from May, feature a much closer balance between production and consumption than for 1993/94. Output is projected to increase 10 percent to 84 million bales, use is expected to rise 1 percent to 85.5 million, and trade may expand modestly. Stocks are projected to fall 6 percent to 28.4 million bales.

For 1993/94, world production remains at 76.0 million bales, while consumption is trimmed to 84.4 million. However, exports are revised up 2 percent to 26.7 million bales. Ending stocks of 30.1 million bales are 1 percent below a month earlier and 22 percent below their beginning level.

1/ Upland and extra-long staple; marketing year beginning August 1. Totals may not add due to rounding. 2/ Based on Bureau of Census data. 3/ Includes imports. 4/ Reflects the difference between ending stocks based on Bureau of Census data and the previous season's supply less total use. 5/ Domestic measure, cents per pound; metric measure, dollars per kilogram. The 1993/94 prices are weighted averages for August-March; not a projection for the marketing year. 6/ USDA is prohibited from publishing cotton price projections. * Planted area reported in March 31 Prospective Plantings. Projected harvested area based on 1984-93 average acreage abandonment, by state, of 7.5 percent. Projected yield based on 1969-93 State trends, weighted by area.

Note: Tables on pages 29-31 present a 13-year record of the differences between the June projection and the final estimate. Using world wheat production as an example, changes between the June projection and the final estimate have averaged 15.7 million tons (3.0%) ranging from -25.1 to 20.4 million tons. The June projection has been below the estimate 8 times and above 5 times.
