WORLD AGRICULTURAL SUPPLY AND DEMAND ESTIMATES

United States Department of Agriculture

Washington, D.C.

Approved by the World Agricultural Outlook Board

WASDE-293 - August 11, 1994

HIGHLIGHTS

WHEAT: Projected U.S. 1994/95 ending stocks are down 64 million bushels from last month. Forecast production is down 34 million from last month, largely because of a drop in spring wheat yields. Projected total use is up 30 million bushels as larger exports and food use more than offset a smaller feed and residual use. The projected price range is up 25 cents on the low end and 15 cents on the high end to $2.90 to $3.40 per bushel.

Global 1994/95 supply, use and ending stocks projections are down from last month. Projected production in Australia is 3 million tons below last month, as dry weather resulted in lower plantings than expected earlier and cut prospective yields. Adverse weather also has reduced crop prospects in Ukraine, Canada and several other countries. However, projected production is up for Eastern Europe. Projected exports are reduced for Australia, but are higher for the United States and Eastern Europe.

COARSE GRAINS: The first survey-based forecast of the 1994 U.S. corn crop is 9.2 billion bushels, up 214 million from last month's projected crop and almost 2.9 billion bushels above last year. The sorghum crop is also up substantially from last month and last year. With the larger supplies and lower prices, projected 1994/95 feed and residual use of corn is up 50 million bushels from last month and sorghum, 25 million. Also, projected corn exports are up 25 million bushels and sorghum, 25 million. Thus, the projected 1994/95 ending stocks of corn are up 114 million from last month and almost double the expected carryin level. The projected price range for corn is down 5 cents on each end to $1.95 to $2.35 per bushel.

Projected global coarse grain production in 1994/95 is marginally higher than last month because of the larger U.S. crop. Foreign production, however, is down. Hot, dry weather has cut yield prospects in the EC, the Baltic States and Ukraine and prospective barley plantings in Australia. Also, corn area in Argentina is lowered for both 1993/94 and 1994/95. With reduced competition and higher global imports, U.S. corn and sorghum exports are up from last month.

RICE: Near-record yields are forecast to result in a record U.S. crop, slightly above last month and 21 percent above 1993/94. Projected 1994/95 domestic use and exports are unchanged from last month. Projected 1994/95 global rice production, consumption and ending stocks are up from last month, while world trade is nearly unchanged. Larger forecast crops for India and Thailand account for most of the production increase. South Korea's crop is reduced by 5 percent.

OILSEEDS: U.S. soybean production is forecast at a record 2.28 billion bushels (62.1 million metric tons), 6 percent above last month and 26 percent above 1993/94. Excellent growing conditions are propelling soybean yields to a forecast 37.6 bushels per acre, matching the 1992/93 record. World soybean production in 1994/95 is projected at a record 127.8 million metric tons. Foreign soybean production, at 65.7 million tons, is off slightly from last month and last year. Recent sharp declines in soybean prices are expected to discourage some soybean plantings, particularly in South America where planting usually begins in October. Combined sunflower and rapeseed production, both for the world and United States, is essentially unchanged this month, but is up significantly from last year.

U.S. soybean and product exports are higher in response to larger U.S. availabilities and upward revisions to China's vegetable oil imports. Projected soybean exports of 665 million bushels are up 6 percent from last month and 15 percent above 1993/94. Soybean oil exports are raised by 200 million pounds for both 1993/94 and 1994/95, aided by sharply higher imports by China. Reduced prices are expected to boost U.S. soybean meal exports to 5.3 million short tons in 1994/95 and add to the soybean crush, which is projected at a record 1.31 billion bushels.

U.S. soybean ending stocks are projected to more than double in 1994/95 to 370 million bushels. Soybean season-average prices are projected to range between $4.75 to $5.75 per bushel, off 6 percent from last month; soybean meal prices are lowered to $155 to $175 per short ton; and soybean oil drops to 22.0 to 25.0 cents per pound.

SUGAR: U.S. sugar production in fiscal year 1994/95 is projected at 7.78 million short tons, raw value, up 80,000 tons from last month, and 3 percent higher than 1993/94. The revised forecast is based on sugar beet and sugarcane production estimates released August 11 in USDA's Crop Production report.

On August 8, USDA announced a tariff rate quota for sugar imports of 1,458,333 short tons for the period of August 1, 1994 to September 30, 1995. Sugar not yet entered from the previous quota period--358,000 tons--will be allowed to enter through September 1995.

For fiscal year 1993/94, the cane sugar production estimate is increased 20,000 tons because of greater than anticipated output in Hawaii. Imports are increased 55,000 tons because of the new quota and higher quota-exempt imports. The export forecast for 1993/94 is reduced 70,000 tons.

LIVESTOCK, POULTRY, DAIRY: The U.S. meat supply, use and price forecasts for 1994 and 1995 are little changed from last month. Total meat production is still forecast to increase around 4 percent in both 1994 and 1995.

The milk production forecasts for 1993/94 and 1994/95 are up slightly from last month as the number of milk cows is larger than anticipated. Commercial disappearance of dairy products has been stronger than anticipated, boosting commercial use forecasts this month. CCC net removals for 1993/94 are reduced as the pickup in use exceeds the larger production. The milk price forecasts are boosted slightly by this tighter supply/use situation.

APPROVED (8:30 a.m. release):

SECRETARY OF AGRICULTURE

****

The next issue of this report will be released on September 12, 1994.

This report was prepared by the Interagency Commodity Estimates Committees and approved by the World Agricultural Outlook Board, Gerald A. Bange, Acting Chairperson (202) 720-8651. Contact committee chairpersons at (202) 720-9805.

INTERAGENCY COMMODITY ESTIMATES COMMITTEES

1/ Fiscal years beginning Oct 1. Puerto Rico not included. 2/ Historical data are from ASCS, "Sweetener Market Data." 3/ Forecast for 1994/95 is based on sugar beet production in the August 11 "Crop Production" report. Sugar recovery from beets is the projected linear trend of 1982-93 recoveries. Net additional sugar from desugarization of molasses is forecast at 235,000 STRV. 4/ Forecast for 1994/95 mainland is based on sugarcane production in the August 11 "Crop Production" report, forecast percent of cane harvested for sugar, and sugar recovery from cane equal to the 1989-93 average excluding the high and low years for each state. Hawaii forecast is based on information from knowledgeable sources. 5/ Actual arrivals under the tariff rate quota with late entries and quota overfills assigned to the fiscal year in which they actually arrived. Forecast imports under quota in 1994/95 assume a shortfall of 33,000 tons from the quotas covering fiscal years 1993, 1994, and 1995. 6/ Quota exempt imports (for reexport, for polyhydric alcohol, from Canada, and high-duty). 7/ Mostly reexports and shipments to Puerto Rico. 8/ Transfer to sugar containing products for reexport, for nonedible alcohol, and feed. 9/ Residual.

Approved by the World Agricultural Outlook Board WASDE-293 - August 11, 1994

COTTON HIGHLIGHTS

This month's U.S. cotton outlook for 1994/95 is for much larger production, mill use, and stocks. The 1994 crop is forecast at a record 19.2 million bales, up 6.6 percent from July indications and nearly 2 percent above the previous record in 1937. While projected exports remain at 7.3 million bales, mill use is revised up 3.8 percent to 11 million, reflecting recent trends in domestic use. These revisions imply U.S. ending stocks of 4.5 million bales, 22 percent above the level indicated last month.

Larger production and stocks highlight this month's world cotton revisions. With bigger crops envisioned for several countries, particularly the United States and China, 1994/95 global production is projected at 85.8 million bales, up 2.3 percent from July. While consumption is revised up slightly from last month to 86.7 million bales, trade is off slightly. This season's ending stocks are placed at 28.5 million bales, 4 percent above last month but still 4 percent below the beginning level.

APPROVED (3:00 p.m. release):

1/ Upland and extra-long staple; marketing year beginning August 1. Totals may not add due to rounding. 2/ Based on Bureau of Census data. 3/ Includes imports. 4/ Reflects the difference between ending stocks based on Bureau of Census data and the previous season's supply less total use. 5/ Domestic measure, cents per pound; metric measure, dollars per kilogram. 6/ USDA is prohibited from publishing cotton price projections. *Planted area reported in June 30 Acreage. Projected harvested area based on 1984-93 average acreage abandonment, by state, of 7.5 percent. Projected yield based on 1969-93 State trends, weighted by area.

Note: Tables on pages 29-31 present a 13-year record of the differences between the August projection and the final estimate. Using world wheat production as an example, changes between the August projection and the final estimate have averaged 13.2 million tons (2.6%) ranging from -32.1 to 10.7 million tons. The August projection has been below the estimate 7 times and above 6 times.
