WORLD AGRICULTURAL SUPPLY AND DEMAND ESTIMATES

United States Department of Agriculture

Washington, D.C.

Approved by the World Agricultural Outlook Board

WASDE-296 - November 9, 1994

HIGHLIGHTS

WHEAT: Projected U.S. 1994/95 ending stocks are up 5 million bushels from last month because of an increase in forecast imports. All other supply, use and price projections are unchanged. Imports of wheat and wheat products in the June-August quarter were 30.7 million bushels, more than double the year-earlier level. The U.S.-Canada agreement on limiting Canada's shipments of wheat to the United States runs for a year beginning September 12, 1994.

Projected 1994/95 global production and use are down from last month, but ending stocks are higher. Projected production for Australia is down 700,000 tons and the combined output of Russia and Kazakhstan is off 5 million tons from last month. The smaller global use and higher ending stocks are largely tied to changes in Russia, Kazakhstan, and Ukraine that are unrelated to lower production estimates. Substantial downward revisions have been made in the historical consumption estimates for these countries, which are reflected in the larger stocks estimates.

COARSE GRAINS: U.S. corn production is forecast at 10 billion bushels, up 408 million bushels from last month, because of larger area and yields. The larger crop is partially offset by a 150-million-bushel increase in projected feed and residual and a 25-million-bushel rise in industrial use, leaving ending stocks of corn up 233 million bushels from last month. The larger projected use of corn in the production of ethanol reflects high prices of methanol (the feedstock for MTBE) and a recent ruling by the Internal Revenue Service allowing ETBE to qualify for the Federal excise tax exemption. In the past the exemption was provided only to renewable alcohol used in gasoline production. The projected price range for corn is down 5 cents on each end to $1.85 to $2.25 per bushel.

Projected global 1994/95 production is up from last month as the larger U.S. corn crop more than offsets smaller coarse grains crops in Australia, Russia and Kazakhstan. Most of the rise in projected 1994/95 global ending stocks is due to the larger U.S. stocks.

RICE: Record yields are forecast to result in a record U.S. crop, 2 percent above last month and nearly 26 percent above 1993/94. Projected U.S. exports of long-grain rice are raised 2 million hundredweight from last month. Projected 1994/95 global rice production and ending stocks are up from last month because of larger crops in the United States, Egypt, Japan, Pakistan, the Philippines and Thailand. Smaller 1994/95 crops are projected for Italy, the former Soviet Union (FSU) and Vietnam.

OILSEEDS: U.S. 1994 soybean production is forecast at a record 2,523 million bushels (68.7 million tons), up 3 percent from last month and 35 percent from last year. World soybean production is forecast at 132.6 million tons, up only 1 percent from last month as foreign output is cut slightly to 63.9 million tons because of reductions in the FSU and the EU. Other significant oilseed production changes include a 3-percent reduction from last month in world sunflowerseed output to 22.8 million tons as crops are reduced in the FSU and the EU.

U.S. exports of soybean oil are revised up sharply this month to 1,850 million pounds, while soybean exports increased to 770 million bushels. Soybean oil exports are the highest since 1987 and reflect large vegetable oil purchases by China in recent months from most major

producers and exporters. Recent Brazilian soybean purchases from the United States largely explain this month's higher U.S. exports. The Brazilian imports are for crushing, with most of the products for re-export.

U.S. soybean ending stocks are forecast to reach 495 million bushels, second only to the record 1985/86 carryover of 536 million bushels. Soybean oil inventories are forecast lower than last month at 1,335 million pounds but still above the very low 1993/94 carryover of 1,091 million pounds.

Season-average soybean prices are forecast higher this month at $4.80 to $5.50 per bushel, supported by a sharp increase in forecast soybean oil prices, to 24.5 to 27.5 cents per pound. Soybean meal prices are unchanged at $150 to $165 per short ton.

SUGAR: U.S. sugar production in fiscal year 1994/95 is projected at a record 8.19 million short tons, raw value, up 3.4 percent from last month and 6.7 percent from last year. The revised forecast is based on sugar beet and sugarcane production estimates released in today's Crop Production report. Sugar beet yields, and sugarcane yields in Florida and Louisiana, are higher than previously forecast. The cane sugar forecast includes 1.84 million tons in Florida, 920,000 in Louisiana, 565,000 in Hawaii, 115,000 in Texas, and 50,000 in Puerto Rico. Sugar deliveries in 1994/95 are forecast to increase 1.3 percent. Production in 1993/94 is increased 76,000 tons from last month because of unusually high beet sugar output in September and a revision in the estimate for Florida.

LIVESTOCK, POULTRY, DAIRY: In recent weeks, U.S. pork production has exceeded expected levels, adding 75 million pounds to the fourth-quarter 1994 output estimate. Broiler producers continue to increase output at a faster-than-anticipated pace as returns remain favorable. Broiler production estimates for 1994 and 1995 are boosted this month with year-over-year increases now placed at 7 and 5 percent, respectively. The 1995 turkey production forecast is revised this month as hatchery activity for next year's production is increasing.

The cattle, hog and broiler price forecasts for 1995 are all down from last month. Very large meat supplies continue to depress prices. Large supplies and weak prices are helping support strong growth in exports. For 1994, export increases of 18, 15, and 37 percent are now forecast for beef, pork and broilers, respectively.

Milk production and commercial use in 1993/94 are increased slightly this month. The 1994/95 production forecast also is boosted as recent data have shown the number of cows and output per cow to be larger than anticipated. Lower feed prices and weak cull cow prices may be an incentive to keep cows in the herd longer and boost feeding rates. The commercial use forecast for 1994/95 is raised as use of dairy products continues strong and above expected levels.

APPROVED (8:30 a.m. release):

RICHARD ROMINGER
ACTING SECRETARY OF AGRICULTURE

****

NOTE: The next issue of this report will be released 3:00 p.m. Eastern Time on December 9, 1994.

This report was prepared by the Interagency Commodity Estimates Committees and approved by the World Agricultural Outlook Board, Gerald A. Bange, Acting Chairperson (202) 720-8651. Contact committee chairpersons at (202) 720-9805.

USDA Announces First Outlook Forum

Join top analysts at the USDA Economic Outlook Forum, February 22 and 23, 1995, in Washington, D.C. The Forum, which replaces USDA's traditional outlook conference, will feature new long-term commodity projections and a lively debate on trends shaping future prospects. For more information, call 202-720-3050.

1/ Fiscal years beginning Oct 1. Includes Puerto Rico. 2/ Historical data are from ASCS, "Sweetener Market Data." 3/ Production in 1994/95 is Interagency Sugar Estimates Committee forecast. 4/ Actual arrivals under the tariff rate quota with late entries and quota overfills assigned to the fiscal year in which they actually arrived. Forecast imports under quota in 1994/95 assume a shortfall of 83,000 tons from the quotas covering fiscal years 1993, 1994, and 1995. 5/ Quota exempt imports (for reexport, for polyhydric alcohol, from Canada, and high-duty). 6/ Mostly reexports. 7/ Transfer to sugar containing products for reexport, for nonedible alcohol, and feed. 8/ Residual. 9/ Includes approximately 320,000 tons in excess of marketing allotments in 1994/95.

Approved by the World Agricultural Outlook Board WASDE-296 - November 9, 1994

COTTON HIGHLIGHTS

U.S. cotton prospects this month are about unchanged as record production and near-record total use continue to highlight the 1994/95 outlook. Output is forecast at 19.5 million bales, up nearly 1 percent from October indications. While the mill use forecast remains at 11 million bales, exports are raised 3 percent to 7.2 million, reflecting reduced crops in several foreign countries. U.S. ending stocks are projected at 4.9 million bales, the same as a month earlier.

This month's world cotton outlook for 1994/95 features slightly smaller production and consumption, along with larger stocks. Production is projected at 86.8 million bales, marginally below last month's estimate as smaller crops in Pakistan, the former Soviet Union, Greece, and Australia more than offset larger crops in China, the African Franc Zone and the United States. Global consumption is trimmed less than 1 percent to 85.9 million bales, reflecting smaller use in Pakistan and the former Soviet Union. World trade remains about unchanged. This season's ending stocks are placed at 30.9 million bales, slightly above both last month's projection and the beginning stocks level.

1/ Upland and extra-long staple; marketing year beginning August 1. Totals may not add due to rounding. 2/ Based on Bureau of Census data. 3/ Includes imports. 4/ Reflects the difference between ending stocks based on Bureau of Census data and the previous season's supply less total use. 5/ Less than 5,000 bales, domestic measure; less than 5,000 tons, metric measure. 6/ Domestic measure, cents per pound; metric measure, dollars per kilogram. 7/ USDA is prohibited from publishing cotton price projections.

Note: Tables on pages 29-31 present a 13-year record of the differences between the November projection and the final estimate. Using world wheat production as an example, changes between the November projection and the final estimate have averaged 6.1 million tons (1.2%) ranging from -18.1 to 7.2 million tons. The November projection has been below the estimate 8 times and above 5 times.
