WORLD AGRICULTURAL SUPPLY AND DEMAND ESTIMATES

United States Department of Agriculture
Economic Research Service
Foreign Agricultural Service

Approved by the World Agricultural Outlook Board

WASDE-274 - January 12, 1993

HIGHLIGHTS

Prospects for U.S. wheat exports are improved this month, but domestic use is lower, so projected 1992/93 carryover stocks of 486 million bushels are down only slightly from last month's 498 million. Carryover corn stocks are forecast at 2,247 million bushels, up from 2,097 million last month because of a bigger 1992 crop.

Expected U.S. soybean stocks of 355 million bushels are slightly above the 340 million of last month because of a larger crop, while cotton stocks of 4.4 million bales are unchanged from last month. Prospective U.S. sugar stocks of 1.34 million short tons are up 60,000 because of larger imports for reexport.

Prospective 1993 U.S. meat production is up very slightly in line with continued increases in pork output. Milk output per cow remains at a high level and 1992/93 production is projected slightly higher this month and nearly 1 percent above last year.

GRAINS

WHEAT. Global 1992/93 wheat supply and use projections are little changed in aggregate from last month. Smaller forecast imports for China, Syria and Bangladesh are largely offset by higher prospective imports for Eastern Europe, Turkey and Pakistan. Forecast exports are down for Australia because an extended period of rain at harvest is resulting in quality problems, and Canada's exports continue to be constrained by the reduced quality of the 1992 crop. Thus, U.S. wheat export prospects are up from last month.

Projected U.S. 1992/93 wheat ending stocks are down about 12 million bushels from last month as a 50-million-bushel increase in exports more than offsets higher prospective imports and reduced domestic use. While food use and seed use are down slightly from last month, most of the reduction in domestic use is due to a 25-million-bushel drop in prospective feed and residual use. First-quarter feed and residual use is revised down because of an upward revision in September 1 stocks, and December 1 stocks implied a larger than expected negative residual for the second quarter. The price range is up 5 cents on each end to $3.20 to $3.40 per bushel.

COARSE GRAINS. Projected world 1992/93 supply and ending stocks are up from last month, but trade is down. Larger corn crops in the United States and Mexico are the major production changes. The largest of numerous changes in forecast imports is a drop of 1 million tons in forecast barley imports by the former Soviet Union. Larger projected U.S. ending stocks account for most of the gain in global ending stocks.

Estimated U.S. 1992/93 corn production is up 150 million bushels from last month and is reflected in higher projected ending stocks.

Projected 1992/93 ending stocks of barley and oats also are up from last month because of lower prospective barley exports and higher oats imports.

RICE. Prospective 1992/93 global rice production and consumption are largely unchanged from last month, while ending stocks are down. Global trade is forecast higher because of larger exports by Vietnam.

Forecast U.S. 1992/93 production is up more than 6 percent from last month and is nearly 14 percent above last year's revised crop. The rise in production is due to an increase in both harvested area and yield. Domestic and residual use is raised 4 million cwt from last month, while exports are up 2 million. Ending stocks are up nearly 5 million cwt from last month. The projected price range for 1992/93 is lowered 5 cents on both ends to $5.85-$6.35 per cwt.

OILSEEDS

World oilseed production for 1992/93 is forecast at a record 225.0 million tons, up from last month and about 1 percent above last year. U.S. production is up about 1 percent from last month at 68.7 million tons, and up 7 percent from last year, mostly because of record yields. Foreign production is forecast at 156.3 million tons, off 2 percent from last year's record high, but up slightly from a month earlier. Major revisions for foreign countries include higher Argentine soybean production for both 1991/92 and 1992/93 and a higher 1991/92 crop estimate for sunflowerseed. Year-end U.S. production estimates released by USDA's National Agricultural Statistics Service show soybean gains that more than offset reductions for other oilseeds. World soybean production in 1992/93 is forecast at 113.6 million tons, up 1.1 million tons from last month and 6.7 million from last year. U.S. soybean production of 59.8 million tons is up 11 percent from a year earlier and was exceeded only in 1979/80.

The U.S. 1992/93 soybean crush is unchanged this month, while foreign forecasts for both crush and exports are about 1 percent higher. Soybean crush and exports are higher this month for Argentina as are crush and imports for the EC.

The principal forecast change in the soybean products accounts this month is higher world soybean meal use, based mainly on upward revisions for China and the EC. Reduced soybean meal exports from China are offset by an increase for Argentina and a small rise for the United States. U.S. soybean meal production is revised upward based on higher meal extraction rates. Conversely, a lower extraction rate for soybean oil and increased domestic use cut U.S. soybean oil ending stocks by 17 percent to the lowest level in 3 years. World vegetable oil inventories are projected at 15 percent below the 1989/90 peak.

U.S. soybean stocks are up this month because of the larger U.S. soybean crop. The drawdown in U.S. soybean oil stocks is supporting higher soybean oil prices this month, while soybean meal prices are increased based on stronger-than-expected year-to-date prices. The soybean price forecast range is narrowed to $5.30-$5.50 per bushel. Soybean oil prices are forecast at 20.0 to 22.5 cents per pound. Soybean meal prices are forecast to range between $170 to $190 per short ton.

COTTON

This month's global cotton outlook for 1992/93 again features a close balance between production and consumption. Output is forecast at 85.7 million bales, fractionally below a month ago because of a 7-percent reduction in Brazil's crop estimate. The China crop forecast remains at 21 million bales. World consumption is placed at 85.6 million bales, also modestly below a month earlier. Textile mill activity in the former Soviet Union continues to deteriorate and cotton use is revised down a further 8 percent to 6 million bales. Prospective world exports also are off slightly, reflecting smaller Brazilian shipments. World ending stocks are projected at nearly 41 million bales, marginally above last month and the beginning level.

U.S. cotton ending stocks for 1992/93 are unchanged this month as production is forecast at 16.3 million bales, the same as December indications. With mill use and export forecasts also unchanged, the ending stocks projection remains at 4.4 million bales.

SUGAR

Projected U.S. sugar production in fiscal year 1992/93 is 7.6 million short tons, raw value, unchanged from last month. The fiscal-year forecast is based mostly on this month's crop-year production forecast. Projected fiscal-year beet sugar production of 4.2 million tons is about 50,000 tons higher than the crop-year forecast because of anticipated large sugar output in September 1993. This projection includes about 250,000 tons of beet sugar produced from the desugarization of molasses.

The cane sugar production estimate is unchanged from last month because increases in the forecasts for Florida to 1.78 million tons and Louisiana to 868,000 tons are offset by decreases in the forecasts for Texas and Hawaii, to 113,000 tons and 639,000 tons, respectively. Hawaii's fiscal-year 1992/93 production forecast was reduced 36,000 tons because of the planned closure of a sugar mill on March 31, 1993.

The forecast for quota-exempt sugar imports is raised 60,000 tons from last month, mostly because imports under the reexport program are expected to exceed shipments under the program. Companies operating under the program have exported more sugar than they imported. The imbalance this year will help to even the accounts.

The forecast for sugar use is unchanged from last month's estimate. The ending stock forecast is increased 60,000 tons to 1.34 million tons, similar to last year's ending stocks.

LIVESTOCK, POULTRY AND DAIRY

The recent Hogs and Pigs report indicated that producers are still expanding output. March-May farrowing intentions were slightly larger than previously assumed and the fourth-quarter 1993 pork production estimate is raised 50 million pounds. Other quarters are unchanged.

Recent steer prices have been higher than expected as fed cattle marketings have been slowed by poor feedlot conditions. The first-quarter 1993 steer price forecast is raised $2 per cwt from last month.

Milk production has recently been slightly higher than expected and prices a little lower. However, the large quantities of nonfat dry milk that were contracted for under the Dairy Export Incentive Program in December and for delivery later this year will tighten markets. A significant price impact is expected later this year. Milk price forecasts for this winter are lowered, but are increased for the rest of the year.

APPROVED:

David A. Shuman

Ending stocks	11.7	12.9	15.3	14.6

Note: Totals may not add due to rounding. Reliability calculations at end of report. 1/ Marketing year beginning August 1. 2/ Includes the following quantities of broken kernel rice (type undetermined) not included in estimates of beginning stocks by type (in mil. cwt): 1990/91, 1.4; 1991/92, 1.4; 1992/93, 1.4. 3/ Residual includes unreported use, processing losses and estimating errors. Use by type may not add to total rice use because of the difference in brokens between beginning and ending stocks. 4/ Marketing-year weighted average price received by farmers. 5/ Includes imports.

1/ Fiscal years beginning Oct. 1. Puerto Rico not included. 2/ Historical data are from NASS, "Sugar Market Statistics" and ASCS, "Sweetner Market Data." 3/ Actual arrivals under the quota with late entries and quota overfills assigned to the fiscal year in which they actually arrived. The tariff rate quota for 1992/93 was set at 1,357,000 short tons. Estimated arrivals assume a shortfall of 30,000 tons. 4/ Quota exempt imports (for reexport, for polyhydric alcohol, from Canada, and high-duty), plus arrivals from Puerto Rico. Imports of flavored sugar and products with very high sugar content such as tea mixes, gelatin, and miscellaneous food preparations are not included. The sugar content of imports of these products is estimated at slightly more than 100,000 STRV in 1991/92. 5/ Includes shipments to Puerto Rico. Other exports are mostly reexports. 6/ Transfer to sugar containing products for reexport, for polyhydric alcohol, and feed. 7/ CCC disposal for domestic nonfood use, refining loss/gain adjustment, and residual.

Does not reflect any deductions from producers as authorised by legislation.

Note: Tables on pages 29-31 present a 11-year record of the differences between the January projection and the final estimate. Using world wheat production as an example, changes between the January projection and the final estimate have averaged 3.7 million tons (0.7%) ranging from -8.3 to 6.4 million tons. The January projection has been below the estimate 7 times and above 4 times.
