WORLD AGRICULTURAL SUPPLY AND DEMAND ESTIMATES

United States Department of Agriculture
Economic Research Service
Foreign Agricultural Service

Approved by the World Agricultural Outlook Board

WASDE-262 - January 13, 1992

HIGHLIGHTS

Global grain stocks are forecast slightly tighter this month, primarily reflecting higher use than anticipated in the United States and India. U.S. corn stocks next September 1 are projected at 1,076 million bushels, down 158 million from last month, mainly because of an upward revision in feed and residual use. Expected wheat stocks of 390 million bushels next June 1 are down 24 million from a month ago and still the smallest since 1974. Stocks are forecast lower because wheat feed and residual use and exports are up more than food and seed use are down.

Prospective world cotton supplies are higher this month, as a larger crop indicated for China more than offsets smaller U.S. production. The U.S. crop is down more than the reduction in projected use this month, bringing expected carryover stocks down slightly to 4.1 million bales. Prospective world and U.S. soybean supply and use are up slightly from a month ago. U.S. 1991/92 carryover stocks of 325 million bushels are up 10 million bushels from a month ago as a larger crop more than offsets improved export prospects.

Projected 1992 U.S. pork and beef output gains are trimmed this month. But, with the sluggish economy, price projections are lower.

NOTE: Estimates of the Former (Fmr.) USSR in this report cover the same area previously designated as the USSR.

GRAINS

WHEAT. Forecast 1991/92 world wheat production and trade are little changed from last month. However, ending stocks are lower than a month earlier, largely because of an increase in estimated 1990/91 and 1991/92 consumption in India. Forecast global 1991/92 ending stocks are around 10 percent below a year earlier, mostly because of the reduction in U.S. stocks.

Forecast U.S. 1990/91 ending stocks are down 24 million bushels from last month because of higher exports. Forecast feed and residual disappearance is up 25 million bushels from last month because reported December 1 stocks indicate more use than expected. However, the higher feed and residual use is offset by a reduction in forecast food use and seed use, leaving total domestic use unchanged. The forecast price range is up 15 cents on the low end and 5 cents on the high end to $3.00 to $3.10 per bushel.

COARSE GRAINS. Forecast 1991/92 global coarse grain production is up from last month, mainly because of larger crops of sorghum in Sudan and corn in France and Argentina. Consumption also is up, with the United States, Sudan and Argentina accounting for most of the gain.

For the United States, the 1991/92 supply of corn and other feed grains is little changed from last month, but total use is up because of gains in forecast domestic use. With the reported December 1 stocks indicating feed and residual disappearance for corn above expected levels for the first quarter, forecast annual domestic use is up 150 million bushels. Also contributing

to the expected larger corn feed and residual was a further reduction in the wheat feed and residual for next summer. Tighter U.S. 1991/92 wheat stocks, higher prices and less winter wheat planting for the 1992 crop than was expected will lead to less wheat feeding and more corn feeding next summer. Thus, 1991/92 ending stocks for corn are down 158 million bushels from last month and 445 million below carryin levels. The forecast price range for corn is up 15 cents on the low end and 5 cents on the high end to $2.35 to $2.65 per bushel.

RICE. Prospective 1991/92 global rice production and consumption are up from last month while ending stocks are down, principally because of changes in the supply and use forecasts for India and Vietnam. For India, lower forecast 1991/92 production and higher use reduced projected ending stocks. Revisions in the supply and use data for Vietnam for 1991/92 and the previous 2 years resulted in an increase in 1991/92 production and consumption.

Forecast U.S. production for 1991/92 is down 4.5 million cwt from last month and 1.6 million below the revised 1990/91 output. Projected domestic and residual use for 1991/92 is up 2.5 million cwt from last month because of the upward revision in the 1990/91 domestic use. The slower than expected pace of exports to date led to a 3-million-cwt decline in forecast exports. Ending stocks are projected at 23.9 million cwt, down 4 million from last month. The projected price range for 1991/92 is up 25 cents on the low end to $7.00-$7.75 per cwt.

OILSEEDS

World oilseed production for 1991/92 is forecast at 223.5 million tons, up slightly from last month and up 3 percent from last year. Foreign production is forecast at 159.2 million tons, up 0.4 million from last month. A larger cottonseed crop in China and a prospective larger sunflowerseed crop in Argentina more than offset declines for rapeseed in Poland and soybeans in Argentina and India. U.S. oilseed production is placed at 64.3 million tons, up 0.6 million from the previous estimate, as larger soybean, sunflowerseed and flaxseed crops more than offset a reduced cottonseed crop. U.S. soybean production is estimated at 54.0 million tons or 1,986 million bushels, up 0.6 million tons from the last estimate, based on record yields. Global soybean crush for 1991/92 is forecast at 88.7 million tons, up a little from last month because of improved soybean meal use prospects in Europe and East Asia. U.S. crush is unchanged from a month ago.

World soybean exports are nearly unchanged from last month, but U.S. exports are forecast higher at 18.1 million tons or 665 million bushels, based on improved global soybean meal consumption prospects.

U.S. soybean oil exports are forecast at 535,000 metric tons, up slightly from a month ago. Recently announced U.S. export initiatives for vegetable oil are expected to aid soybean oil exports.

U.S. season-average prices for soybeans and soybean oil are unchanged from last month, while soybean meal prices were reduced slightly to a range of $165 to $180 per short ton.

LIVESTOCK, POULTRY AND DAIRY

The recent Hogs and Pigs report indicates less expansion in pork production than previously forecast. September-November sow farrowings were below producers' September intentions and farrowing intentions for this spring show a smaller than expected increase. Pork production in 1992 is now forecast to increase about 6 percent from last year's level compared with a forecast rise of more than 7 percent last month.

The beef production forecast for 1992 is down slightly from a month ago as marketings of cattle from feedlots likely will fall short of previous expectations. Fourth-quarter 1991 beef production was around 55 million pounds lower than expected as fed cattle marketings and average slaughter weights were lower than anticipated.

The poultry production forecast is little changed from last month. Turkey prices in late 1991 and early 1992 have exceeded expectations. The turkey price forecast for 1992 is up slightly from last month's. Egg prices are now much weaker than anticipated and the estimate for the first quarter of 1992 is down from last month's.

The demand for beef and pork appears to be weakening as the economy continues to lag. Current cattle and hog prices are lower than expected and the weakening demand likely will hold prices below previously anticipated levels. Both the cattle and the hog price forecasts are lowered this month.

Milk supply, use and price forecasts are unchanged from last month.

COTTON

This month's revisions in the global cotton outlook for 1991/92 feature larger stocks stemming from larger production and smaller consumption. Output is revised up 1 percent this month to a record 91.8 million bales, 5 percent above the 1990 crop. Meanwhile, sluggish textile activity is contributing to a slight downward revision in world mill use to 86.1 million bales. Trade prospects are about unchanged. Ending stock forecasts continue to increase with the carryover now placed at 34 million bales, 7 percent above last month and 20 percent above beginning stocks.

A smaller crop and reduced exports highlight changes in this month's U.S. cotton outlook for 1991/92. Production is forecast at 17.5 million bales, down 3 percent from last month but 13 percent above the 1990 crop. Exports are revised down 6 percent to 6.8 million bales, reflecting recent slow sales and increased production abroad. With mill use unchanged this month, ending stocks are projected at 4.1 million bales, down 2 percent from last month but still nearly 2 million bales above the carryin.

Prospects for larger 1991/92 foreign cotton production and smaller consumption primarily reflect revisions for China. Output in China is placed at 23.4 million bales, up 6 percent from December indications, while use is estimated at 19.5 million bales, down 2.5 percent. Elsewhere, output is revised up in Brazil and Syria and revised down in India. Stocks in foreign countries are projected at 30 million bales, with China accounting for more than one-third of the total.

APPROVED:

David A. Swanson

Ending stocks	0.65	0.51	0.91	0.89
Avg. farm price 5/	1.46	1.51	6/	6/

NOTE: Reliability calculations at end of report.
1/ Upland and extra-long staple; marketing year beginning August 1. Totals may not add due to rounding. 2/ Based on Bureau of Census data. 3/ Includes imports. 4/ Reflects the difference between ending stocks based on Bureau of Census data and the previous season's supply less total use. 5/ Domestic measure, cents per pound; metric measure, dollars per kilogram.
6/ USDA is prohibited from publishing cotton price projections.

Note: Tables on pages 27-29 present a 10-year record of the differences between the January projection and the final estimate. Using world wheat production as an example, changes between the January projection and the final estimate have averaged 3.8 million tons (0.8%) ranging from -8.3 to 6.4 million tons. The January projection has been below the estimate 7 times and above 3 times.

New Year. New Ideas.

Agriculture Outlook '92

Live from USDA in Washington, December 3-5

USDA's 68th outlook conference will abound with new ideas. Ideas to help farmers and consumers, such as growing our fuel, reforming world trade and improving food labels. Ideas on how new policies and world events will affect agriculture in 1992 and beyond.

Put those ideas to work for you. Attend the conference or watch it live over C-band satellite on December 3, 9:00-5:15, EST, and December 5, 8:30-2:00, EST. Tune to Westar V Satellite, Channel 23, 4160 Mhz both days. Call (202)-720-3050 to request registration information or a viewing guide to the broadcast. To obtain audio or video tapes, call 1-800-369-5718. For conference publications call 1-800-999-6779.

Four Ways To Benefit from Agriculture Outlook '92:

* Audiotapes * Videotapes * Proceedings * Chartbook

Important Notice to Subscribers
Multiyear Subscriptions, Improved Service

These improved services are now available for subscribers to the ***World Agricultural Supply and Demand Estimates*** report:

- Order by phone toll-free.
- Subscribe for one, two or three years.
- Pay by purchase order, check, money order, MasterCard or Visa.
- Receive invoice on request.
- Publications of USDA's National Agricultural Statistics Service and Economic Research Service available from the same source.

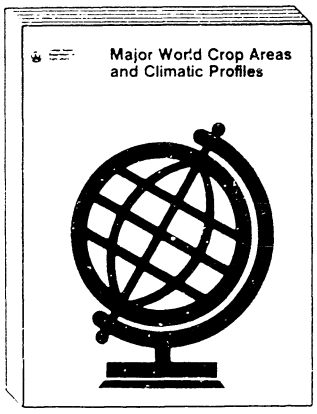

Subscriptions to the World Agricultural Supply and Demand Estimates report (WASDE) cost $20.00 for one year, $40.00 for two years and $60.00 for three years. Add 25 percent for non-U.S. addresses, including Canada.

To subscribe or renew call toll-free 1-800-999-6779 in the U.S. and Canada. Others call (301) 725-7937. Call between 8:30 a.m. and 5:00 p.m., ET. Or, write ERS-NASS, P.O. Box 1608, Rockville, MD 20850.

Special Offer.
Buy a 2- or 3-year subscription to WASDE and receive a complimentary copy of "Major World Crop Areas and Climatic Profiles," Agricultural Handbook No.664. This 160-page reference, an $8.00 value, helps you track crop developments in key producing regions by relating production, geography, climate data and the stages of crop growth. Offer valid while supplies last.

When Does Your Subscription Expire? Your subscription expires in the month and year shown on the top of your mailing label. The expiration date will appear either as: FEB90 (for February 1990) or 900216 (for February 16, 1990). Disregard if no renewal date appears.
