WORLD AGRICULTURAL SUPPLY AND DEMAND ESTIMATES

United States Department of Agriculture
Economic Research Service
Foreign Agricultural Service

Approved by the World Agricultural Outlook Board

WASDE-266 - May 11, 1992

HIGHLIGHTS

NOTE: See page 23 for analytical assumptions underlying 1992/93 projections and for reporting changes applicable to the former USSR.

Preliminary projections for 1992/93 suggest the world wheat crop will increase slightly from 1991/92. However, supplies will remain relatively tight because of a low level of carryin stocks. With consumption slightly exceeding increased production, ending stocks will drop marginally. Prospective world coarse grain output is up from 1991/92, largely because of anticipated increases in the former USSR and the United States. World and U.S. stocks are expected to increase because of the larger crops.

World oilseed supplies are expected to decline slightly in 1992/93 because of smaller crops. Smaller U.S. acreage and trend yields suggest a U.S. soybean crop below 1991/92. Prospective use, although smaller, will be above the crop, resulting in smaller U.S. stocks at the end of 1992/93. U.S. and world 1992/93 cotton supplies and ending stocks are projected to increase further. Despite sharply lower prices at planting time, several major producing countries are projected to maintain or expand output.

U.S. sugar production for the 1992/93 fiscal year is projected at a record high 7.5 million short tons. Beet sugar is expected to account for all of the increase.

U.S. meat production for 1992 is forecast below last month because of lower than expected beef output. Milk prices are stronger than expected and the price forecasts are increased.

GRAINS

Wheat. Projected 1992/93 global production is up from 1991/92, but consumption, trade and ending stocks are down. Global output is projected up around 1 percent, with the former USSR and the United States accounting for much of the gain. Global wheat trade for 1992/93 is projected down as smaller imports by the former USSR, Korea and Mexico more than offset expected increases in the North Africa/Middle East region, China and Eastern Europe. Exports are expected to rise for Australia and Argentina, but decline for the United States, Canada and Turkey.

U.S. 1992/93 winter wheat production is forecast up almost 18 percent. Assuming average yields for spring wheat, total U.S. wheat is projected around 14 percent above 1991/92. While use is projected to drop because of lower feed and residual use and exports, it is expected to be only slightly below production plus imports, leaving projected 1992/93 ending stocks up slightly from forecast carryin levels. U.S. farm prices of wheat are projected at $3.15-$3.55 per bushel, compared with $3.00-$3.05 for 1991/92. For 1991/92, forecast ending stocks are up 55 million bushels from last month because of lower forecast feed and residual and exports. Forecast 1991/92 exports are down because some China purchases and anticipated sales to Russia are not expected to be shipped until the new marketing year. Feed and residual use is down 25 million bushels to offset the recent upward revision in mill grind by the Bureau of the Census.

Coarse Grains. Global 1992/93 supply, use and ending stocks are projected up from 1991/92. While U.S. output is projected up around 14 percent, foreign production is also projected above 1991/92, largely because of the former USSR. World 1992/93 coarse grain trade is forecast down, largely because of a reduction for the former USSR.

Larger U.S. corn plantings and higher yields are projected to result in a 1992/93 corn crop of almost 8.6 billion bushels, up around 15 percent. While larger domestic use is projected to raise total use above the forecast 1991/92 level, production will exceed it, leaving projected 1992/93 ending stocks more than 550 million bushels above forecast carryin. The farm price of corn is projected to average $1.90-$2.30 per bushel, compared with $2.30-$2.50 for 1991/92. Forecast 1991/92 ending stocks of corn are down from last month because of a 25-million-bushel increase in exports.

Rice. Global 1992/93 rice production is projected to rise marginally, but carryin stocks are down about 6 percent. With consumption above production, projected 1992/93 ending stocks are down slightly. World 1992/93 trade is projected to increase slightly.

U.S. 1992/93 supplies are projected to increase around 10 percent from last year, with both production and carryin stocks up. Despite a projected rise in domestic use and exports, 1992/93 ending stocks are projected up more than 11 percent. Prices are projected to average $6.50-$7.50 per cwt, compared with $7.45-$7.65 for 1991/92.

OILSEEDS

World oilseed production in 1992/93 is projected at 223.0 million tons, less than 1 percent below 1991/92's record outturn. Foreign oilseed production is projected to show only a 1-percent gain to 161.4 million tons as below-average relative returns for oilseeds slow area expansion. U.S. oilseed production is projected at 61.6 million tons, 4 percent below 1991/92. Area declines, particularly for soybeans, account for most of the drop. A return to normal planting conditions and more favorable returns for grain crops are causing the area decline in 1992.

Below-trend growth in foreign oilseed output will help U.S. 1992/93 export prospects. Sluggish demand growth, however, will constrain U.S. soybean and soybean meal exports, leading to small declines. U.S. soybean oil exports are projected to remain close to 1991/92 levels although competitive vegetable oil supplies abroad, particularly palm oil, likely will show modest growth. U.S. domestic use of both soybean meal and soybean oil are expected to show only small gains. U.S. feed use will be characterized by more animal feed units but reduced protein meal feeding rates. Supplies of competing oil meals will again be large and use of protein supplements is likely to rise. A stronger U.S. economy and relatively low prices should support increased domestic soybean oil use.

Total U.S. soybean use will decline slightly in 1992/93 but use likely will exceed production, leading to a drawdown in U.S. soybean stocks to 235 million bushels. Soybean oil stocks are forecast to reach a record 2.4 billion pounds as new supply exceeds relatively high use levels.

For 1992/93, U.S. season-average prices for soybeans and soybean meal are projected to range a little higher, while soybean oil prices remain about unchanged from 1991/92.

Global and U.S. changes for 1991/92 are small this month. A decline in Argentina's sunflowerseed crop accounts for most of a reduced global oilseed output estimate of 223.9 million tons. U.S. soybean stocks are cut 10 million bushels to 295 million based on prospective larger exports.

COTTON

The world cotton outlook for 1992/93 is for production to again exceed use, resulting in a further gain in stocks. Despite sharply lower prices at planting time this spring, output is expected to decline only slightly from 1991/92 to a projected 94 million bales as policies in several major producing countries are aimed at maintaining or expanding output. Competitive prices, coupled with prospective economic growth in several large countries, should help boost global consumption nearly 4 percent to a record 89 million bales. Larger use bodes well for a rebound in trade to 24 million bales. Ending stocks are projected at 43 million bales, up nearly 5 million from a year earlier to the highest level since 1986.

U.S. cotton prospects for 1992/93 also point to a further stocks buildup. Based on farmers' planting intentions, average abandonment and trend yields, production is projected at 17.2 million bales, 2 percent below the 1991 crop. Demand is expected to increase modestly, with mill use pegged at 9.5 million bales and exports at 7 million. However, with production above use, stocks are expected to increase 800,000 bales to 4.7 million, equal to 28.5 percent of total use.

SUGAR

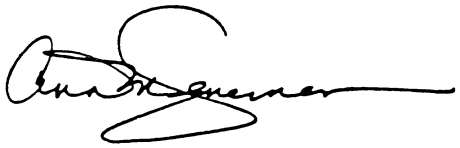

U.S. sugar production for fiscal year 1992/93 is projected at a record high 7.5 million short tons, up 4 percent from the current year. Beet sugar is expected to account for all of the increase. Domestic deliveries in fiscal year 1992/93 are projected to increase 1.1 percent. Forecast fiscal year 1991/92 U.S. sugar deliveries are reduced this month from 8.85 million short tons to 8.80 million. Both imports and exports under the reexport programs are revised higher.

LIVESTOCK, POULTRY AND DAIRY

U.S. beef production for 1992 is forecast below that of a month ago. Movement of cattle through feedlots is falling below expectations--the inventory of cattle on feed April 1 was 10 percent below a year ago. The production outlook for the other meats is little changed from last month. With recent hog, broiler and turkey prices stronger than anticipated, the forecasts are raised slightly. Egg prices are weaker than expected and the price forecast is lowered.

Prospects point to higher than expected milk prices, raising the forecasts. The milk production forecast is up slightly from a month ago. CCC net removals likely will be larger than previously expected as larger butter removals more than offset smaller cheese and nonfat dry milk removals.

NOTE: Reliability calculations at end of report.
1/ Marketing year beginning August 1. Totals may not add and trade may not balance due to rounding and other factors. 2/ For foreign countries, reflects cotton lost or destroyed in the marketing channel; for the United States, reflects the difference between ending stocks based on Bureau of Census data and implicit stocks based on supply less total use. 3/ Less than 5,000 bales. 4/ Australia, China, Central America, Egypt, Mexico, Pakistan, Sudan, Turkey and the former USSR. 5/ Europe, Japan, Hong Kong, Korea and Taiwan.

EXPLANATORY NOTES

1992/93 PROJECTIONS. This report presents USDA's initial assessment of agricultural supply and demand and price prospects for the 1992/93 season. Projections for U.S. and world crop production and use are based on economic analysis, trends and judgment. Because planting of spring crops is still underway in the Northern Hemisphere and remains several months away in the Southern Hemisphere, early-season projections are highly tentative. Substantial variation may result from weather developments, economic activity and policy changes. U.S. production forecasts adopt National Agricultural Statistics Services (NASS) forecasts for winter wheat and utilize Prospective Plantings for other crops. For crops other than winter wheat, yields basically reflect time series analysis. NASS acreage and production forecasts will be adopted as they become available this summer. Reliability tables showing the historical accuracy of supply/use projections made during May are presented on pages 29-31.

ESTIMATES FOR THE FORMER SOVIET UNION. The projections of 1992/93 grain imports for the former Soviet Union assume various forms of international financial assistance.

Beginning with this issue, estimates for the former Soviet Union are modified:

-- Minor grains and pulses are no longer included in estimates of total grain production. total grain production is defined as wheat, coarse grains and milled rice. (Rice was formerly reported on a rough basis.)

-- Grain production is estimated on a clean-weight basis instead of bunker-weight basis.

-- Supply and demand estimates for wheat and coarse grains are reported separately for the Baltic States and the "FSU-12" former Soviet Union excluding the Baltic States).

For cotton, publication of separate supply and demand estimates for the Baltic States and FSU-12 will start with the July 9 issue.

1/ Fiscal years beginning Oct. 1. 2/ Historical data are from NASS, "Sugar Market Statistics." Puerto Rico not included. 3/ Actual arrivals under the quota with late entries and quota overfills assigned to the fiscal year in which they actually arrived. The tariff rate quota for 1991/92 is set at 1,527,000 short tons. Projected arrivals assume a shortfall of 20,000 tons. 4/ Quota exempt imports (for reexport, for polyhydric alcohol, from Canada, and high-duty), plus arrivals from Puerto Rico. 5/ Includes shipments to Puerto Rico. Other exports are mostly reexports. 6/ Transfer to sugar containing products for reexport, and to polyhydric alcohol. 7/ CCC disposal for domestic nonfood use, refining loss/gain adjustment, and residual.

Does not reflect any deductions from producers as authorised by legislation.

Note: Tables on pages 29-31 present a 11-year record of the differences between the May projection and the final estimate. Using world wheat production as an example, changes between the May projection and the final estimate have averaged 14.5 million tons (2.8%) ranging from -25.1 to 20.6 million tons. The May projection has been below the estimate 6 times and above 5 times.

1/ See pages 29 and 30 for record of reliability for U.S. wheat, rice, soybeans and cotton. 2/ Final estimate for 1981/82-90/91 is defined as the first November estimate following the marketing year and for 1991/92 last month's estimate. 3/ May not total 11 for crops and 10 for animal production if projection was the same as the final estimate. 4/ Calendar years 1982 thru 1991 for meats and eggs; October-September years 1981/82 thru 1990/91 for milk. Final for animal products is defined as latest annual production estimate published by NASS.
