WORLD AGRICULTURAL SUPPLY AND DEMAND ESTIMATES

United States Department of Agriculture

Washington, D.C.

Approved by the World Agricultural Outlook Board

WASDE-292 - July 12, 1994

NOTE: This report adopts U.S. acreage and production forecasts for winter wheat, durum, other spring wheat, barley and oats released today by the National Agricultural Statistics Service (NASS). For other crops, area estimates reflect the June 30 NASS Acreage report. Yields for these crops reflect time series analysis and judgment supplemented with information on the probable impact of weather to date. As such, these projections remain highly tentative. Survey-based area, yield and production forecasts reported by NASS will be adopted in the August 11 issue of this report.

Projected 1994/95 U.S. wheat and barley imports do not reflect any restrictions on U.S. grain imports as a result of action under Article 28 of GATT or any other actions.

HIGHLIGHTS

WHEAT: Projected U.S. 1994/95 ending stocks are up 62 million bushels from last month because of larger production and carryin stocks. Forecast winter wheat production is down from last month, but the first survey-based forecast for spring wheat output (including durum) indicates higher yields than the trend yields projected last month. U.S. durum production is forecast up 32 million bushels from last year, but sharply lower carryin stocks will be partially offsetting. The projected price range for all wheat is down 10 cents on each end to $2.65 to $3.25 per bushel.

Global 1994/95 supply, use and ending stocks projections are down from last month. Lower forecast area in China, Canada, Australia, Russia and Kazakhstan and lower yield prospects for Turkey account for most of the drop in forecast production and ending stocks.

COARSE GRAINS: Projected U.S. 1994/95 ending stocks of corn are up 285 million bushels from last month. Projected corn production is raised 275 million bushels because of slightly larger area and improved yield prospects. The expected year-to-year gain in industrial use is lowered because of the recently announced phase-in of renewable oxygenates requirements used in the reformulated gasoline program. Also, forecast carryin stocks are up 45 million bushels, largely because of lower forecast feed and residual use for 1993/94. In contrast, larger exports are projected because of more competitive prices. The projected price range for corn is down 10 cents on each end to $2.00 to $2.40 per bushel.

Projected global 1994/95 supply and ending stocks are up from last month, mainly because of larger U.S. corn production and stocks.

RICE: The projected 1994/95 U.S. crop is raised 7.0 million hundredweight from last month, primarily because of an area increase. Exports are projected up slightly because of increased supplies and more competitive prices. Ending stocks for 1994/95 are up from last month. The projected price range for 1994/95 is lowered 50 cents on each end to $5.00-$6.50 per cwt.

Projected 1994/95 global rice production is nearly the same as 1993/94 and down from last month's trend-based projection. Smaller crops are projected this season for Brazil, China, Indonesia and Pakistan; larger crops are projected for Japan, South Korea, Thailand and the United States. Further reduction in global stocks is projected as consumption exceeds production for the fourth year. China accounts for most of the expected decline in global stocks. World trade is projected to decline from 1993/94, largely because of smaller imports by Japan.

OILSEEDS: U.S. soybean production is projected at 2.15 billion bushels or 58.7 million metric tons, 3 percent above last month and 19 percent above 1993/94. Excellent early-season crop conditions and higher acreage indications prompt the upward revision. World soybean production in 1994/95 is projected at a record 124.6 million metric tons, up 9.1 million tons or 8 percent from 1993/94. Foreign production, at 65.9 million tons, is off slightly as small increases in India, Canada and the EU are more than offset by a smaller prospective crop in China. South America's soybean crops are little changed from 1993/94. World production of rapeseed and sunflowerseed is projected up a combined 4.9 million tons or 9 percent from 1993/94, with most of the gains in Canada and the EU.

U.S. soybean and soybean meal exports are projected to increase in 1994/95. Larger competing supplies of rapeseed and sunflowerseed and below-trend growth in foreign oilseed meal demand will limit U.S. export gains. U.S. soybean oil exports are increased over last month for both 1993/94 and 1994/95 because of larger imports by China. U.S. sunflowerseed oil exports in 1994/95 will be supported by narrower price premiums over soybean oil.

Domestic U.S. soybean crush in 1994/95 is projected at a record 1.3 million bushels, 3 percent over 1993/94, supported by continuing strength in domestic soybean meal use.

U.S. soybean ending stocks are projected to nearly double in 1994/95 to 300 million bushels. Both U.S. and world oilseed stocks are projected to be ample relative to needs, but world inventories of all major vegetable oils will remain relatively tight.

The U.S. soybean price is projected at $5.10 to $6.10 per bushel compared with $6.40 for 1993/94. Soybean meal prices are projected down to $155 to $185 per short ton and soybean oil prices are reduced to 23.0 to 27.0 cents per pound.

SUGAR: U.S. sugar production in fiscal year 1994/95 is projected at 7.70 million short tons, raw value, up 30,000 tons from last month, and 2.5 percent higher than 1993/94. The revised forecast is based on sugar beet and sugarcane acreage estimates released June 30 in USDA's Acreage report. For 1993/94, revisions in trade data result in a slight increase in ending stocks.

LIVESTOCK, POULTRY, DAIRY: The U.S. meat production forecasts for 1994 and 1995 are increased this month. The June Hogs and Pigs report showed larger inventories and expansion plans than expected and pork output projections for both 1994 and 1995 are above last month.

Total meat production is forecast to increase around 4 percent in 1994 and 1995. Both the steer and the hog price forecasts are down from last month's levels, largely because of additional pork supplies. Only small changes are made to the poultry supply, use and price forecasts.

Milk supply, use and price forecasts are little changed from last month. A quicker than expected recovery in cheese prices has pushed the milk price forecasts up slightly from last month's levels.

APPROVED (8:30 a.m. release):

SECRETARY OF AGRICULTURE

Production	51.6	53.0	62.5	61.5
Supply, total 5/	64.8	70.4	72.5	71.6
Domestic & residual 3/	35.9	34.2	36.3	36.0
Exports 6/	13.0	28.5	24.0	19.0
Use, total	48.9	62.7	60.3	55.0
Ending stocks	15.8	7.7	12.2	16.6

Note: Totals may not add due to rounding. 1/ Marketing year beginning August 1. 2/ Includes the following quantities of broken kernel rice (type undetermined) not included in estimates of beginning stocks by type (in mil. cwt): 1992/93- 1.5; 1993/94- 2.0; 1994/95- 2.0. 3/ Residual includes unreported use, processing losses and estimating errors. Use by type may not add to total rice use because of the difference in brokens between beginning and ending stocks. 4/ Marketing-year weighted average price received by farmers. 5/ Includes imports. 6/ Exports by type of rice are estimated.
* For June: Planted acres as reported in March 31, 1994, Prospective Plantings. Harvested acres projected using harvested-to-planted ratios for 1991-93. For July: Area planted and area harvested as reported in June Acreage report. Projected yield is derived from a simple linear trend fit over 1964-1993 and adjusted for crop conditions.

1/ Fiscal years beginning Oct 1. Puerto Rico not included. 2/ Historical data are from ASCS, "Sweetener Market Data." 3/ Forecast for 1994/95 is based on the June 30 "Acreage" report. Forecasts of percent of area harvested and beet yield are equal to 1989-93 averages excluding the high and low years. Sugar recovery from beets--excluding net additional sugar from desugarization of molasses--is the projected linear trend of 1982-93 recoveries. Net additional sugar from molasses is forecast at 235,000 STRV. 4/ Forecast for 1994/95 mainland is based on the June 30 "Acreage" report; and forecast percent of cane harvested for sugar, sugarcane yields, and sugar recovery from cane equal to the 1989-93 average excluding the high and low years for each state. Hawaii forecast is based on information from knowledgeable sources. 5/ Actual arrivals under the tariff rate quota with late entries and quota overfills assigned to the fiscal year in which they actually arrived. Estimated imports under quota in 1993/94 assume a shortfall of 60,000 tons from the 2-year, 2.5 million STRV quota for 1992/93 and 1993/94. The quota for 1994/95 has not been announced. 6/ Quota exempt imports (for reexport, for polyhydric alcohol, from Canada, and high-duty). 7/ Mostly reexports and shipments to Puerto Rico. 8/ Transfer to sugar containing products for reexport, for nonedible alcohol, and feed. 9/ Residual.

Approved by the World Agricultural Outlook Board WASDE-292 - July 12, 1994

Note: See page 1 for analytical assumptions underlying 1994/95 projections.

COTTON HIGHLIGHTS

This month's U.S. 1994/95 cotton outlook features larger production and use but smaller stocks than indicated in June. Production is revised up 2 percent to 18.0 million bales in line with larger planted acreage reported on June 30. Mill use and exports also are revised up modestly, to 10.6 and 7.3 million bales, respectively. This would leave ending stocks at 3.7 million bales, 200 thousand bales less than last month but 6 percent above the revised beginning stock level.

World cotton stocks during 1994/95 are expected to decline more than indicated last month as projected consumption may exceed production by 2.4 million bales. Mill use is placed at 86.3 million bales, 1 percent above last month and 2 percent above 1993/94, primarily reflecting brighter consumption prospects for India, China, Pakistan, and the United States. These same countries--all major producers--also are expected to see a rebound in production in 1994/95 from this season's mostly disappointing levels. World output is projected to total 83.9 million bales, near last month's indication and 10 percent above 1993/94. Global exports, at 28 million bales in 1994/95, are expected to benefit from this larger supply and expanding demand, rising 4 percent above last year and last month. Russia's reexports account for most of the increase from June. Projected global stocks of 27.3 million bales would equal 31.6 percent of consumption, the tightest stocks-to-use ratio since 1989/90. Reduced world stocks this month primarily reflect revisions for China.

1/ Upland and extra-long staple; marketing year beginning August 1. Totals may not add due to rounding. 2/ Based on Bureau of Census data. 3/ Includes imports. 4/ Reflects the difference between ending stocks based on Bureau of Census data and the previous season's supply less total use. 5/ Domestic measure, cents per pound; metric measure, dollars per kilogram. The 1993/94 prices are weighted averages for August-March; not a projection for the marketing year. 6/ USDA is prohibited from publishing cotton price projections. *Planted area reported in March 31 Prospective Plantings for June and June 30 Acreage for July. Projected harvested area based on 1984-93 average acreage abandonment, by state, of 7.5 percent. Projected yield based on 1969-93 State trends.

Note: Tables on pages 29-31 present a 13-year record of the differences between the July projection and the final estimate. Using world wheat production as an example, changes between the July projection and the final estimate have averaged 14.9 million tons (2.9%) ranging from -34.6 to 15.4 million tons. The July projection has been below the estimate 8 times and above 5 times.

The United States Department of Agriculture (USDA) prohibits discrimination in its programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs, and martial or familial status. Persons with disabilities who require alternative means for communication of program information (braille, large print, audiotape, etc.) should contact the USDA Office of Communications at 202-720-5881 (voice) or 202-720-7808 (TDD).

To file a complaint, write the Secretary of Agriculture, USDA, Washington, D.C. 20250 or call 202-720-7327 (voice) or 202-720-1127 (TDD). USDA is an equal employment opportunity employer.
