WORLD AGRICULTURAL SUPPLY AND DEMAND ESTIMATES

United States Department of Agriculture

Washington, D.C.

Approved by the World Agricultural Outlook Board

WASDE-295 - October 12, 1994

HIGHLIGHTS

WHEAT: Projected U.S. 1994/95 ending stocks are down 68 million bushels from last month because of a 42-million-bushel reduction in the wheat crop and larger feed and residual use. The projected feed and residual use is up 25 million bushels because the September 1 stocks indicated larger first-quarter use than expected. The projected price range is up 15 cents on the low end and 5 cents on the high end to $3.25 to $3.65 per bushel.

Projected 1994/95 global production, use and ending stocks are down from a month earlier. Projected production is down 2 million tons for Australia because of continuing drought conditions, to the lowest level since 1982/83. Projected exports are down 3 million tons for Australia. While larger projected exports by Argentina will be partially offsetting, a sharp runup in prices in recent months is expected to lead to lower imports for a number of countries. Global ending stocks for 1994/95 are projected to be the lowest since 1980/81.

COARSE GRAINS: Forecast 1994 U.S. corn production is up 345 million bushels from last month to a record 9.6 billion. The larger crop and higher-than-expected carryin stocks are partially offset by a 150-million-bushel increase in exports, leaving ending stocks up 221 million bushels. Total domestic use is unchanged as larger projected feed and residual use is offset by lower industrial use. Projected use for ethanol production is down because of the recent U.S. Court of Appeals stay in implementing the renewable oxygenates program. The projected price range for corn is down 10 cents on each end to $1.90 to $2.30 per bushel.

Projected global 1994/95 coarse grain production is up from last month because of the larger corn crop in the United States. U.S. export prospects are improved this month because of reduced exports for China and the EU and larger imports by a number of countries, especially South Korea. Projected corn exports by China are down 3 million tons from last month because of tight exportable supplies, at least through the fall, and strong domestic demand. Much of the rise in the projected 1994/95 global ending stocks is in the United States.

RICE: Record yields are forecast to result in a record U.S. crop, 1 percent above last month and 23 percent above 1993/94. Projected exports are lowered 2 million hundredweight from last month, while ending stocks are raised 4 million. Projected 1994/95 global rice production and ending stocks are up from last month because of larger crops in the United States, India and Japan.

OILSEEDS: U.S. 1994 soybean production is forecast at a record 2,458 million bushels (66.9 million tons), up 6 percent from last month and 32 percent above last year. U.S. sunflowerseed output of 2.07 million tons is up 75 percent from last year and the largest crop since 1982/83. For the world, soybean production is forecast at a record 131.3 million tons, up 12 percent from last year. World rapeseed output is off this month at 29.5 million tons, mostly because of reduced crop prospects in Canada and Australia.

U.S. soybean exports in 1994/95 are forecast to rebound sharply from last year's low levels to 740 million bushels. Large U.S. availabilities and tight foreign supply-use balances are aiding U.S. soybean and product exports. Domestic soybean meal and oil use are forecast to gain again in 1994/95 in response to an expanding economy and further gains in livestock feeding units, but increased availabilities of competing oilseed meals and vegetable oils will limit the

gains. U.S. soybean ending stocks are forecast to reach 465 million bushels, up 256 million bushels from last year and the highest level since the mid-1980's.

Season-average soybean prices are forecast lower this month at $4.60 to $5.30 per bushel, but price declines are likely to be buffered by strong export markets, particularly in the first half of the 1994/95 marketing year. Soybean meal prices for 1994/95 are forecast at $150 to $165 per short ton while soybean oil prices are forecast at 21.5 to 24 cents per pound, both off 5 percent from last month and down from last year.

SUGAR: Beginning with this report, the U.S. sugar supply and use balance is revised to include the Commonwealth of Puerto Rico. Production in Puerto Rico is estimated at 50,000 tons for both 1993/94 and 1994/95. The revised forecast for 1994/95 also includes a 30,000-ton increase based on sugar beet and sugarcane production estimates released in today's Crop Production report. U.S. sugar production in fiscal year 1994/95 is projected at 7.92 million short tons.

Higher imports in 1994/95 offset the reduction in imports under quota in 1993/94. Exports are reduced because shipments to Puerto Rico no longer are classed as exports; they are included in domestic deliveries. Deliveries of sugar in Puerto Rico are estimated at 120,000 tons in both 1993/94 and 1994/95. Forecast ending stocks include approximately 145,000 tons of beet sugar in excess of the marketing allotment. The stocks-to-use ratio excluding these blocked stocks is 13.8 percent.

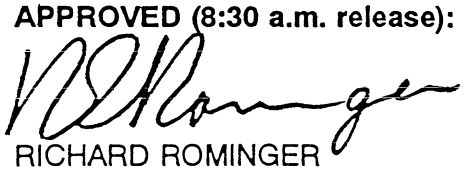

For 1993/94 the U.S. production estimate is raised 20,000 tons to account for higher Hawaiian output, and trade estimates are revised to include preliminary data for the entire fiscal year. Deliveries in 1993/94 are increased 25,000 tons because of larger-than-normal September shipments made in anticipation of allotments.

LIVESTOCK, POULTRY, DAIRY: With higher than anticipated output of beef, pork, broilers and turkey, total meat output is now forecast to increase nearly 5 percent in 1994. The recent Hogs and Pigs report suggested only minor revisions to the 1995 pork production forecast, which is reduced 50 million pounds this month. With strong 1994 broiler production and continued larger hatchery activity, the 1995 broiler production forecast is raised. Total meat output in 1995 is now forecast to increase about 3.5 percent. Large meat supplies are putting strong downward pressure on prices, particularly for cattle and hogs. Cattle and hog price forecasts for the remainder of this year and for 1995 are reduced this month.

Egg production is exceeding expectations largely because the size of the flock is not being reduced as expected. Egg production forecasts for 1994 and 1995 are increased this month and the price forecasts are lowered.

Commercial use of dairy products on a milkfat basis continues strong and above expected levels. The estimated commercial use for 1993/94 is boosted this month and the forecast for 1994/95 also is raised. The production forecast for 1994/95 is up 0.5 billion pounds from last month as the cow herd will be a little larger than previously expected.

APPROVED (8:30 a.m. release):

RICHARD ROMINGER
ACTING SECRETARY OF AGRICULTURE

****

The next issue of this report will be released on November 9, 1994.

This report was prepared by the Interagency Commodity Estimates Committees and approved by the World Agricultural Outlook Board, Gerald A. Bange, Acting Chairperson (202) 720-8651. Contact committee chairpersons at (202) 720-9805.

INTERAGENCY COMMODITY ESTIMATES COMMITTEES

1/ Fiscal years beginning Oct 1. Includes Puerto Rico except for the September 1994/95 column. Puerto Rico data are preliminary. 2/ Historical data are from ASCS, "Sweetener Market Data." 3/ Forecast for 1994/95 is based on sugar beet production in the Oct. 12 "Crop Production" report. Sugar recovery from beets is the projected linear trend for 1982-93. Net additional sugar from desugarization of molasses is forecast at 235,000 STRV. 4/ Forecast for 1994/95 mainland is based on sugarcane production in the Oct. 12 "Crop Production" report, forecast percent of cane harvested for sugar, and sugar recovery from cane equal to the 1989-93 average excluding the high and low years for each state. 5/ Actual arrivals under the tariff rate quota with late entries and quota overfills assigned to the fiscal year in which they actually arrived. Forecast imports under quota in 1994/95 assume a shortfall of 83,000 tons from the quotas covering fiscal years 1993, 1994, and 1995. 6/ Quota exempt imports (for reexport, for polyhydric alcohol, from Canada, and high-duty). 7/ Mostly reexports. 8/ Transfer to sugar containing products for reexport, for nonedible alcohol, and feed. 9/ Residual. 10/ Includes approximately 145,000 tons in excess of marketing allotments in 1994/95.

Approved by the World Agricultural Outlook Board WASDE-295 - October 12, 1994

COTTON HIGHLIGHTS

The U.S. cotton outlook for 1994/95 is highlighted this month by prospects for larger stocks, stemming from an upward revision in production and reduced exports. The 1994 crop is forecast at a record 19.3 million bales, up 1.5 percent from last month. While the mill use forecast remains at 11 million bales, projected exports are cut 4 percent to 7 million as anticipated competition from abroad, particularly Uzbekistan and Turkmenistan, intensifies. Prospective U.S. ending stocks of 4.9 million bales are up 11 percent from September indications.

On the world cotton scene, October prospects for 1994/95 feature slightly larger production, along with smaller consumption and trade. With larger crops forecast in several countries of the former Soviet Union, global production is projected at 87 million bales, up 1 percent from month-earlier indications. Consumption and trade are revised down moderately, reflecting reduced use in several importing countries, most notably Russia. World ending stocks are placed at 30.2 million bales, up 2 percent from last month.

APPROVED (3:00 p.m. release):

Acting Secretary of Agriculture
James S. Gilliland

1/ Upland and extra-long staple; marketing year beginning August 1. Totals may not add due to rounding. 2/ Based on Bureau of Census data. 3/ Includes imports. 4/ Reflects the difference between ending stocks based on Bureau of Census data and the previous season's supply less total use. 5/ Less than 5,000 bales, domestic measure; less than 5,000 tons, metric measure. 6/ Domestic measure, cents per pound; metric measure, dollars per kilogram. 7/ USDA is prohibited from publishing cotton price projections.

Note: Tables on pages 29-31 present a 13-year record of the differences between the October projection and the final estimate. Using world wheat production as an example, changes between the October projection and the final estimate have averaged 8.7 million tons (1.7%) ranging from -36.7 to 8.0 million tons. The October projection has been below the estimate 7 times and above 6 times.
